Introduction

OSP Real Estate is a versatile Responsive Joomla template for Real Estate Websites and supports both Joomla 3.x & Joomla 2.5.

OSP Real Estate also supports RTL Language Layouts and especially it is designed to use with OS Property extension.

With no exception, OSP Real estate is built on the powerful T3 Framework making it a fully responsive Joomla template at default, having all the great features T3 Framework has including ThemeMagic and Layout Configuration tool.

OSP Real Estate comes in 6 color schemes.

Responsive Joomla template for **Joomla 2.5** and **Joomla 3.x**. We have written this the documentation based on Joomla 3.x, please do consider this factor if you are using it for Joomla 2.5.x. No worry, there aren't any big differences between the two.

Field name
Clean & Modern Design
Responsive HTML5 + CSS3 Design
Bootstrap 3 Integration
Cross-browser compatible
Easy to customize
Using T3 Framework

COMPATIBLE BROWSERS:

CREATED: 22th July 2014

SOFTWARE VERSION: OS Property 2.7.3

Requirements

Software

Software: PHP (Magic Quotes GPC off): 5.3.1 + (5.4+ recommended)

Databases

MySQL(InnoDB support required): 5.1+

MSSQL 10.50.1600.1+

PostgreSQL 8.3.18+

Web Servers

Apache 2.x+

Microsoft IIS 7

Nginx 1.0 (1.1 recommended)

Joomla 2.5+ system requirement Software

Software: PHP 5.2.4+ (5.4+ recommended)

MySQL: 5.0.4+

Web Server

Apache: 2.x+

Microsoft: IIS 7

Nginx: 1.0 (1.1 recommended)

Browser requirement

The requirements are the same for both Joomla 2.5 and Joomla 3

Firefox 4+

IE (Internet Explorer) 8+

Google Chrome 10+

Opera 10+

Safari 5+

Development Environment

The requirements are the same for both Joomla 2.5 and Joomla 3

During development process, localhost is preferred. You can use the following servers on your PC to develop your site.

Windows

WAMPSEVER

XAMPP for Windows

Linux

LAMP Bubbler

XAMPP for Linux

Mac OS

PHP Settings

Most of the time installation problems are due to limited resources, for example on shared hosting servers. Here's an overview of the PHP [configuration settings](#) you should check and increase, if needed.

Setting	Description
post_max_size	Amount of data in a single form submission using the POST method.
upload_max_filesize	Size of an individual file uploaded.
max_execution_time	Time in seconds a script is allowed to run before it is terminated by the parser.
memory_limit	Amount of memory in bytes that a script is allowed to allocate.

You may need to allocate more resources for PHP by modifying the php.ini file directly. If this is not possible, you can try setting the PHP settings through an .htaccess file on your web server. Though this also depends on your hosting server, if it allows the usage of .htaccess overrides.

To change the PHP configuration through the php.ini file, use the following syntax.

```
# example of recommended settings
post_max_size = 8M
upload_max_filesize = 8M
max_execution_time = 60
memory_limit = 128M
```

To change the PHP configuration through an .htaccess file, use the following syntax.

```
# example of recommended settings
php_value post_max_size 8M
php_value upload_max_filesize 8M
php_value max_execution_time 60
php_value memory_limit 128M
```

File Permissions

After installing the template your website stays blank, just because your Style sheets and JavaScripts aren't loaded? This might be because the web server is unable to access these files. Make sure that you have set the right file permission to the following directories used by the template

Permissions are inherited from the parent folder. If you set the specific template folder (e.g. /templates/ospt3map) and all sub files/folders to the correct permission but the whole Joomla media folder have lower permissions it will not work. Best way is to alter the permissions of the top level folder. Sometimes Joomla root directory has too low permissions and you wonder why it is not working....

Note:

Always avoid 777 permissions. If your web server has problems with the CHMOD 755, you can also try 775 and lastly 777 in this order.

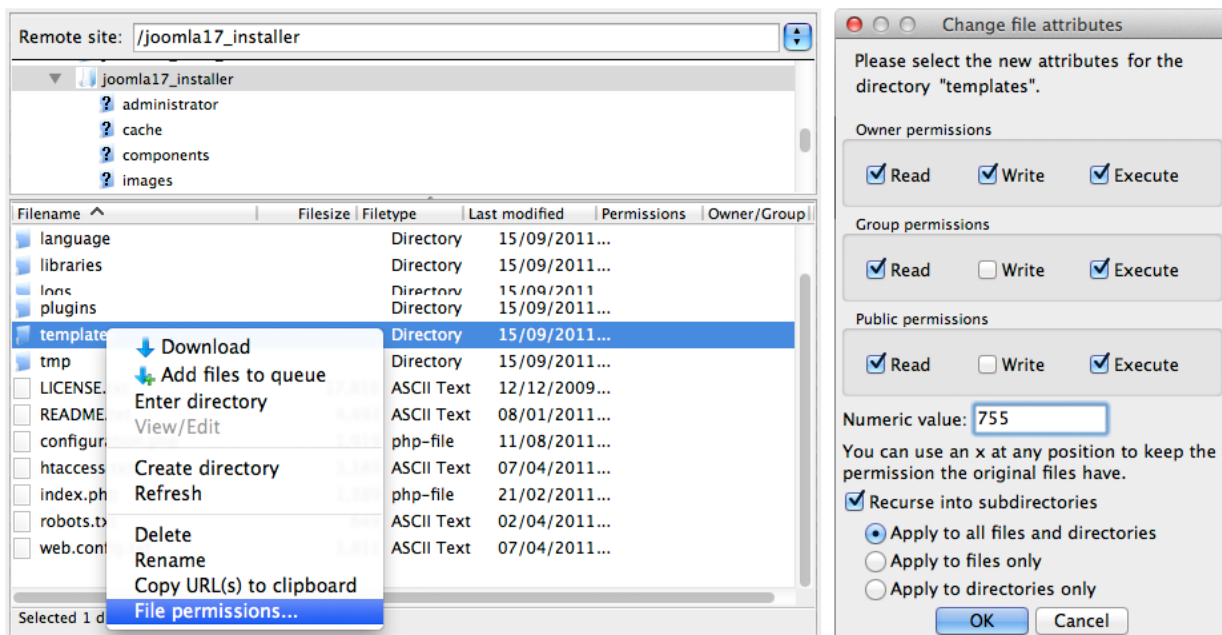

Changing files permission

So how do you change the permissions for files and directories? Here are two step-by-step guides.

1. Using your FTP client

Open your FTP client or if you don't have any download FileZilla and install it. Use your FTP client to login to your server and browse to your web root directory. Right click on a directory which you want to change the permissions on and click File Permissions....

The Change File Attributes dialog, let's you check the options as shown below or type a numeric value like 755. Make sure the Recurse into subdirectories option is checked. Then hit the OK button.

Tip: After applying new permissions some FTP clients require the file view to be refreshed. Otherwise the old permissions will continue to show...

Note:

Using a FTP client may also change file ownership to the FTP user of the files/directories you changed the permissions on. This can cause problems on some web servers. To avoid this you can use a Joomla component like eXtplorer to update the permission through the Joomla administration.

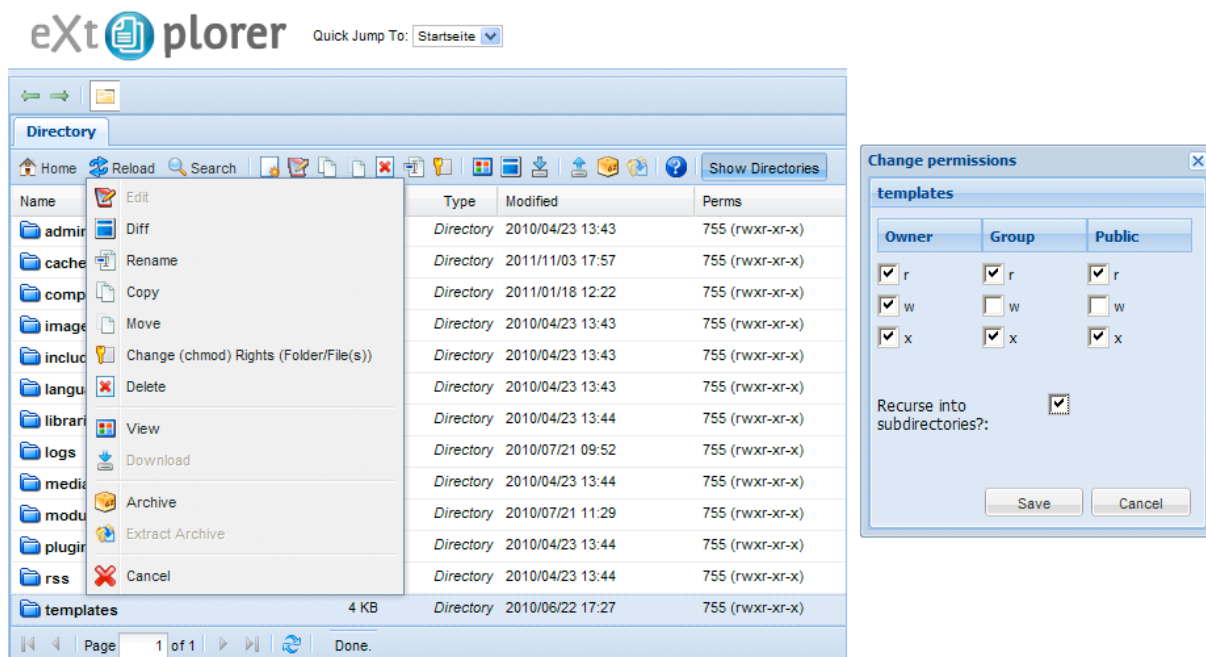

2. Using the eXtplorer Joomla component

Download eXtplorer file manager Joomla component and install it. It allows you to edit, delete, copy, rename, archive and unpack files/directories directly on your webserver.

Login to your Joomla administration, go to the eXtplorer component and browse to the directory which you want to change the permissions on.

Right click on the directory and choose Change Rights

Check the options as shown below. Make sure the Recurse into subdirectories option is checked. Then hit the Save button.

Extensions supported

1. OS Property component & modules
2. T3 Framework
3. JM Slideshow
4. OS Content slideshow
5. OS Facebook like
6. BT login module
7. OS Property Featured Agents

Supported Joomla pages

1. Login
2. Offline Page
3. 404 Page
4. Contact Us
5. Registration Page
6. Edit User Profile

Template packages

When you extract file: Joomla!OSPRealestate_template, you will see 3 folders:

Folder name	Description
osproperty_extension	Contains OS Property extension
Quickstart	This folder contains the template OSPRealestate for Joomla 3.x Joomla!OSPRealestate_template_quickstart.zip
Package	This folder contains the installation version of template, modules and plugins
	OSPRealestate_template_installation.zip : Template installation file
	plg_system_t3.v2.3.0 : T3 system plugin
	mod_mod_bt_login.zip : BT Login module
	mod_jmslideshow-2.0.2.zip : JM slideshow module
	mod_featuredagents.zip : Featured agents module
	mod_os_contentslider.zip : Properties slider module
	mod_osfacebook.zip : Facebook module

User guide

I. Plan your site Development

Overview:

Making a New Site ? - If you are planning to make a new site, then use our Quickstart package to clone the demo site and replace the demo content with yours. Check How to install Quickstart Package.

Installing on your live site ? - If you are planning to use this template on your already live site. Then you should follow How to make your site look like demo site guide first to know about the steps involved. Then you can follow up the user guide below.

1. Install OSPRealestate template with Quickstart Package

a. Introduction and preparation

In All Joomla templates packages created by Ossolution you can find Quickstart Package. Quickstart Package allow you install in few clicks Joomla template, Joomla extensions and Demo data (with OS Property installed), in final you get full Joomla website.

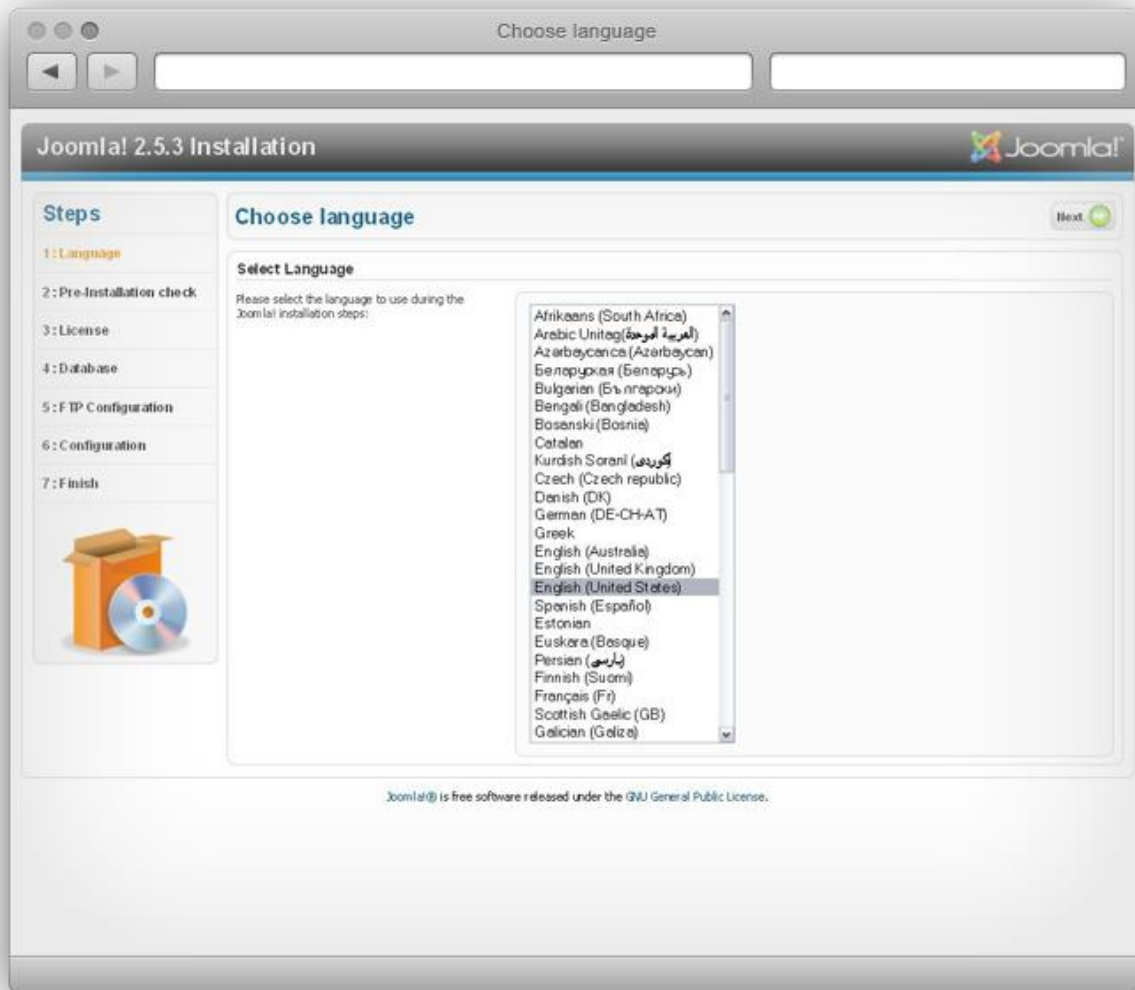

Please extract file Joomla!OSPRealestate _template_quickstart.zip for Joomla 3.x.

b. Uploading on server

Through FileZilla or another FTP software, upload all files from "Joomla!OSPRealestate y_template_quickstart" folder to your website directory.

c. Beginning of installation

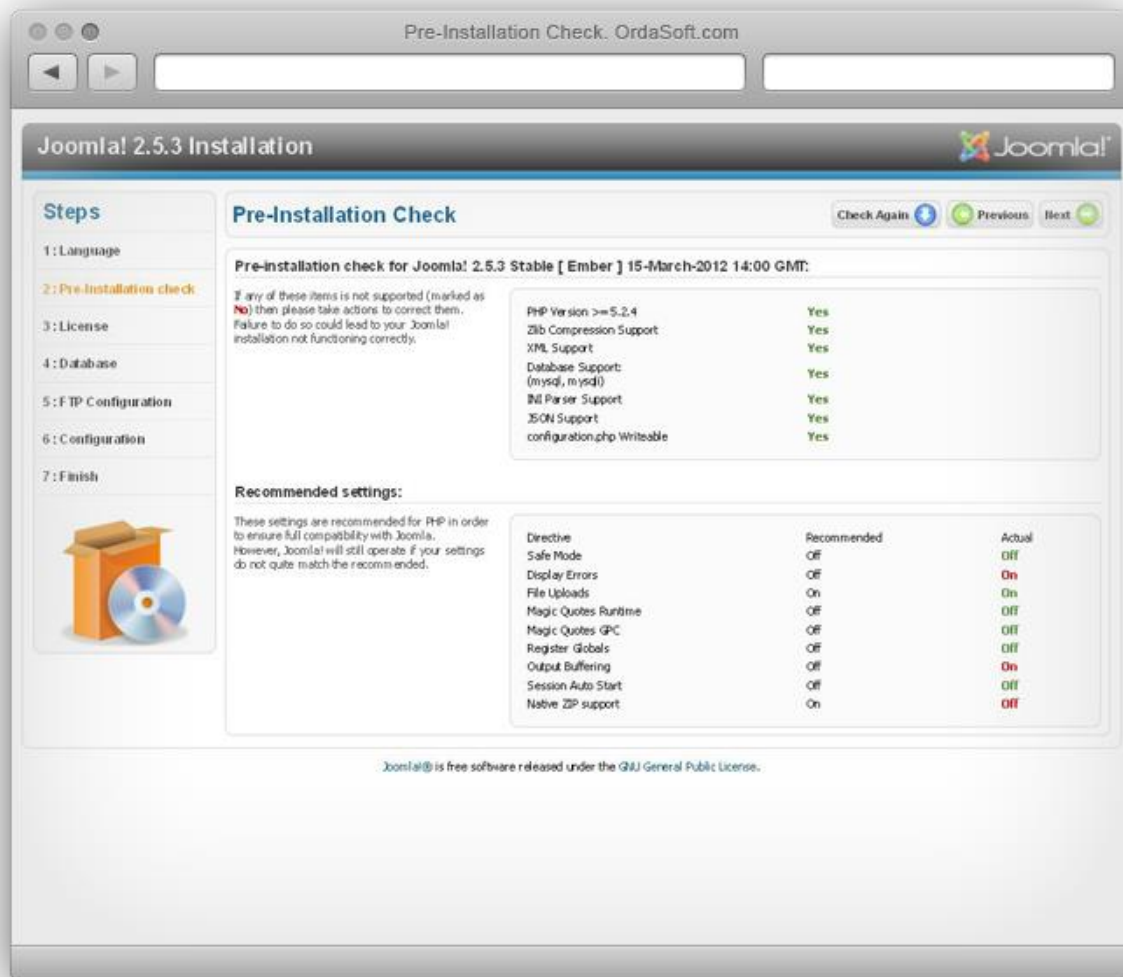

Open your web browser and navigate to the folder that you uploaded your Joomla package. You will see initial Joomla installation page:

Select your language and press "Next".

d. Pre-Installation Check

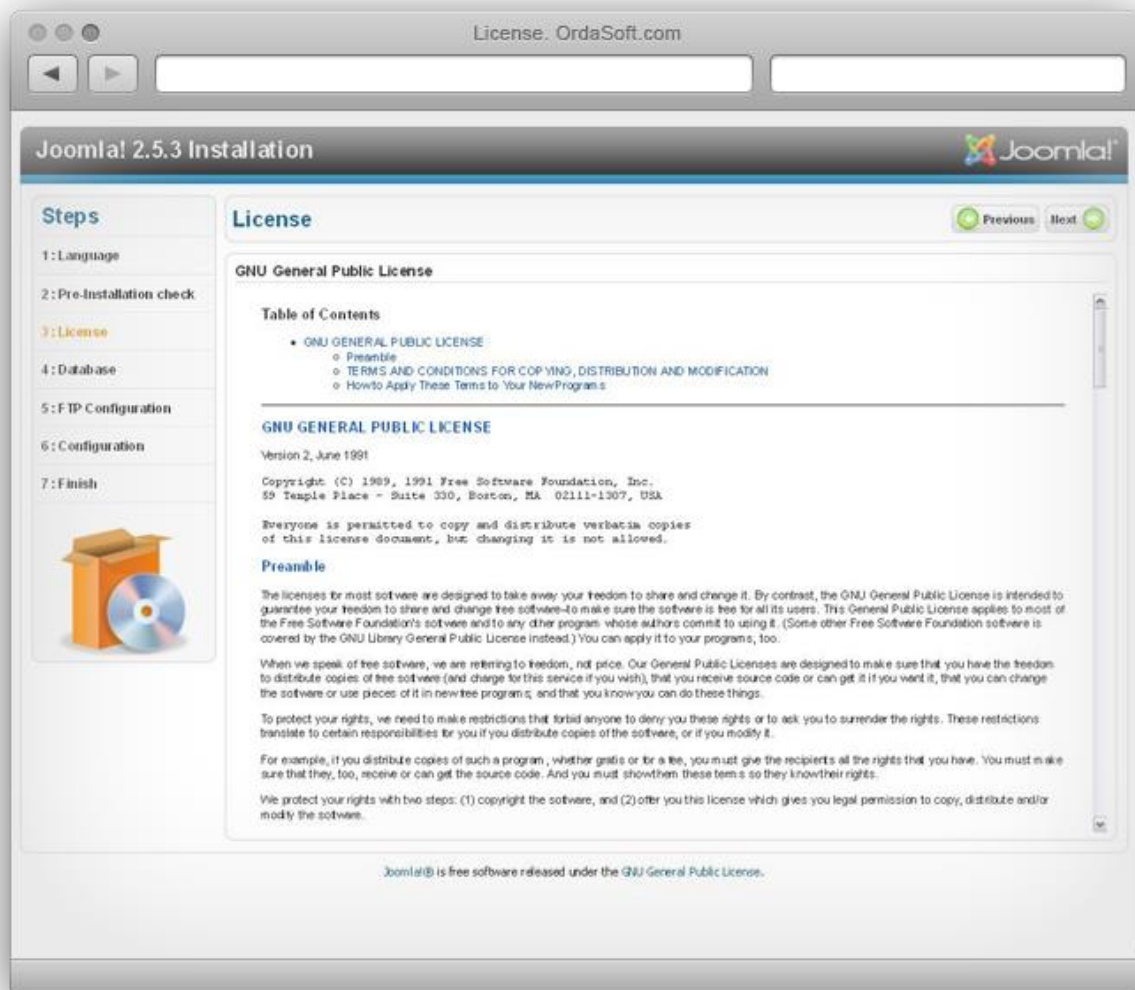

This page will give you a sense of your server compatibility. The top section of items should all be green and 'Yes'. If any are not (they'll be red and say "No") then you will need to take action to correct them.

If all items green and "Yes", press "Next".

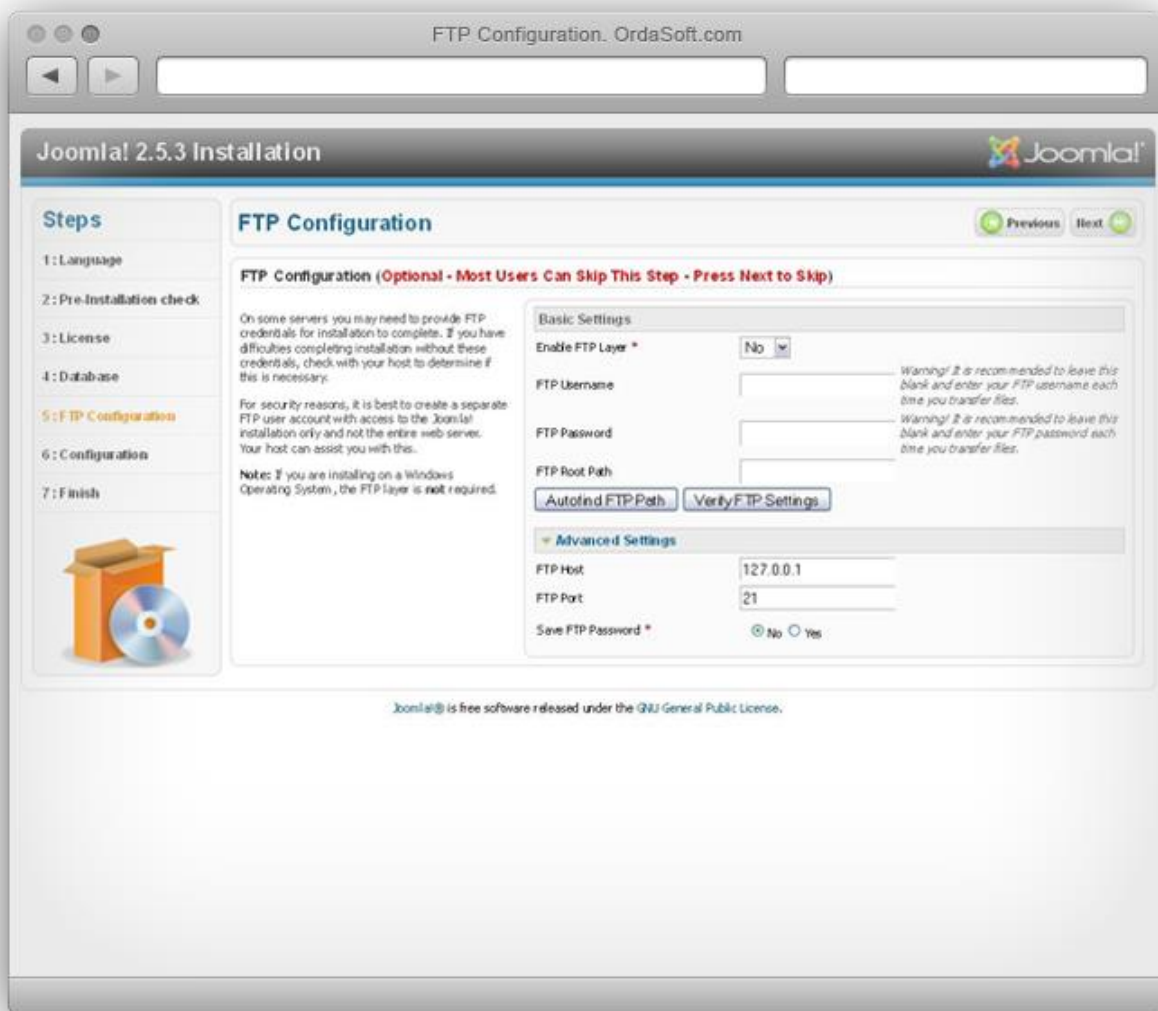

e. License agreement

This is the software license agreement for Joomla! use, and simply requires you to press 'Next' in the top right corner after reviewing.

f. Database Configuration

In page Database configuration you will need to enter the Hostname, User name, password, and database name for the MySQL database you have set up.

The screenshot shows the Joomla! 2.5.3 Installation interface. The browser address bar displays "FTP Configuration. OrdaSoft.com". The Joomla! logo is in the top right corner. On the left, a "Steps" sidebar lists the installation process: 1: Language, 2: Pre-Installation check, 3: License, 4: Database, 5: FTP Configuration (highlighted), 6: Configuration, and 7: Finish. Below the sidebar is an icon of a box and a CD. The main content area is titled "FTP Configuration" and includes a "Previous" button and a "Next" button. A red notice states: "FTP Configuration (Optional - Most Users Can Skip This Step - Press Next to Skip)". Below this, explanatory text says: "On some servers you may need to provide FTP credentials for installation to complete. If you have difficulties completing installation without these credentials, check with your host to determine if this is necessary." and "For security reasons, it is best to create a separate FTP user account with access to the Joomla! installation only and not the entire web server. Your host can assist you with this..". A note mentions that the FTP layer is not required on Windows. The "Basic Settings" section contains: "Enable FTP Layer *" with a dropdown set to "No"; "FTP Username" and "FTP Password" text boxes with warnings to leave them blank; and "FTP Root Path" with "AutoFind FTP Path" and "Verify FTP Settings" buttons. The "Advanced Settings" section contains: "FTP Host" (127.0.0.1), "FTP Port" (21), and "Save FTP Password *" with radio buttons for "No" (selected) and "Yes". At the bottom, a small text line reads: "Joomla! is free software released under the GNU General Public License."

g. Main Configuration

On Main Configuration page you can add a site Name, username and password for first installation set admin / admin, and email for the administrator. IMPORTANT for successful installation Joomla Template Package press "Install Sample Data".

Note: Please select option **Default English OSP Real estate (GB) Sample data**, if you don't select this option, the system will only install the blank Joomla site into your site and you won't have the site like the demo of template.

Main Configuration. OrdaSoft.com

Joomla! 2.5.3 Installation

Steps

- 1: Language
- 2: Pre-Installation check
- 3: License
- 4: Database
- 5: FTP Configuration
- 6: Configuration
- 7: Finish

Main Configuration

Site Name

Enter the name of your Joomla! site.
Optional:
You can also enter Meta Description and Meta keywords for your site.
You may also decide if the site frontend may be immediately available or not after the installation is completed.

Basic Settings

Site Name * OrdaSoft

Advanced Settings - Optional

Confirm the Admin email and Password.

Enter your email address. This will be the email address of the Web site Super Administrator.
Enter a new password and then confirm it in the appropriate fields. You may change the default username **admin**. These will be the Username and password that you will use to login to the Administrator Control Panel at the end of the installation.
If you are migrating, you can ignore this section. Your current settings will be automatically migrated.

Your Email * Support@ordasoft.com

Admin Username * admin

Admin Password *

Confirm Admin Password *

Load sample data

Important! It is strongly recommended that new Joomla! users install the default sample data. To do this click on the button *before* moving to the next stage.

1. Sample data: Before leaving the installation, you can populate the site database with data. There are two ways to do this:

1a. Default sample data can be inserted. To do this, make sure the Default English (GB) Sample Data is displayed in the dropdown and click the Install Sample Data button.

1b. Custom sample data can be inserted. To do this, choose an available sample data in the dropdown and click the Install Sample Data button.

2. Clean Installation: If you wish to perform a clean installation, enter the site name, admin email and choose a password. Then proceed to

Sample Data set

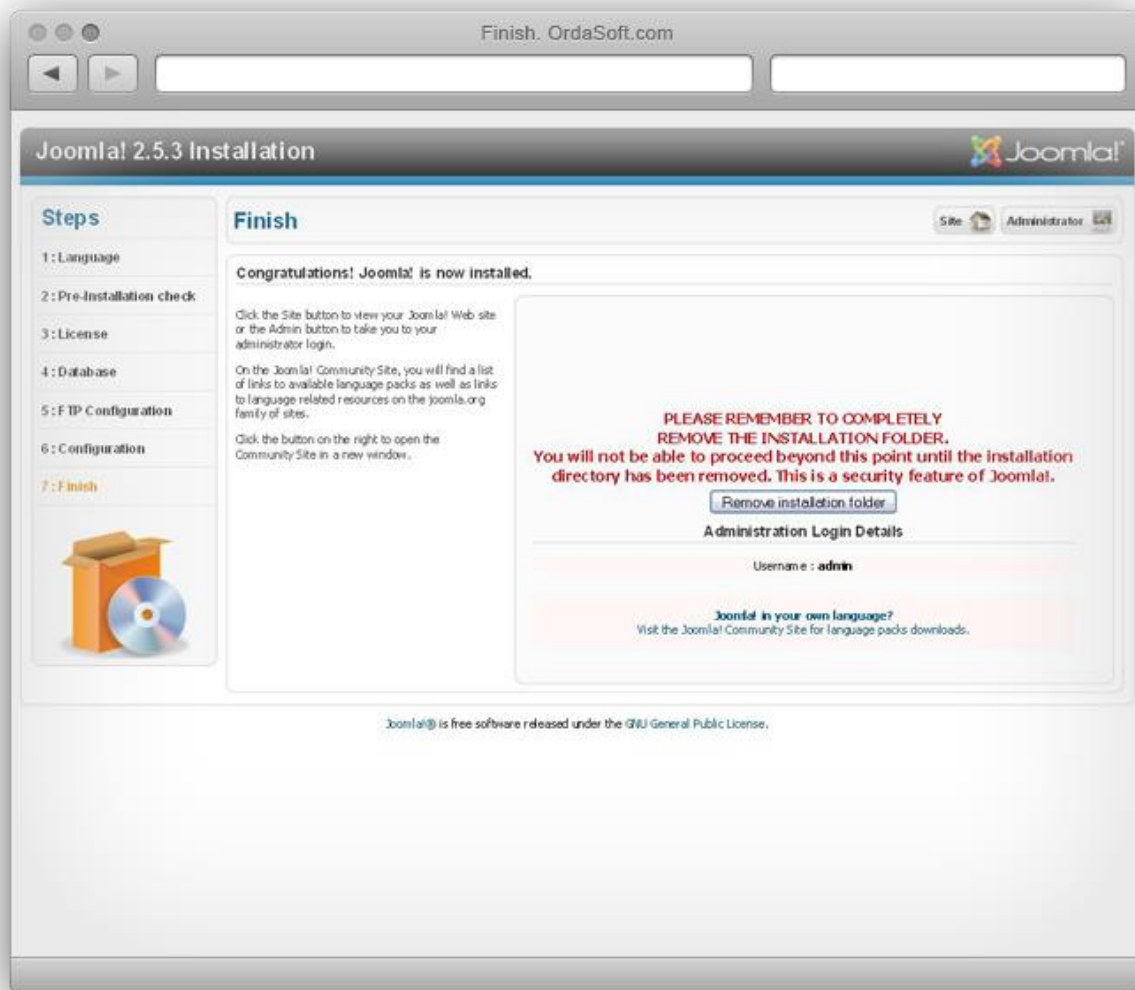

Default English (GB) Sample Data

Install Sample Data

Installing sample data is strongly recommended for beginners. This will install sample content that is included in the Joomla! installation package.

h. Finish

Congratulation, Joomla! is now installed! The last step needed is to remove the **installation** directory!

Note: In the first time launching site, the site will load a bit slowly, no worry, because the system must update cities into OS Property database.

2. Manual installing on your live site

2.1. Installing Template on your Joomla!

Install the Template: Now install the Template on your Joomla 2.5 and Joomla 3.x system. Follow [This Guide](http://youtu.be/iXEAuP2wicU) (<http://youtu.be/iXEAuP2wicU>) if you are not familiar with the installation procedure.

The installation template files is "Joomla!OSPRealestate _template_installation.zip" in folder **Installation > Template**

Template installation tutorial: <http://youtu.be/giRHmbkg-lw>

Extension installation tutorial: <http://youtu.be/zAhD85B32Ho>

2.2. Installing T3 Framework 2 Plugin (T3 system plugin)

You must install T3 plugin if you want to use **OSP Real Estate** template. The plugin file is "plg_system_t3.v2.2.1.zip" in folder **Installation > Plugin**

Download the T3 Framework 2 Plugin (T3 System plugin), Install and enable it.

If you are new, then follow [This Guide](http://youtu.be/t8n7h94Vzss) (<http://youtu.be/t8n7h94Vzss>) to learn to install plugins in Joomla.

3. Template Configuration

Overview:

OSP Realestate template will install with Settings used in the demo site. So you can delay the configuration until you complete the setup (installing the other modules / plugins used in the demo site).

Once you have completed the setup, you can come back to the template backend and check the various options for customizing your template.

Note: T3 V2 template configure are same in Joomla 3.x and Joomla 2.5.

Links to resources on T3 V2 Framework templates and advance configure options :

- **Overview** (<http://t3-framework.org/documentation/introduction#overview>)
- **Installation Guides** (<http://t3-framework.org/documentation/installation#quickstart> and <http://t3-framework.org/documentation/installation#quickstart>)
- **Mega Menu - A missing menu system for Joomla!** (<http://t3-framework.org/documentation/menu-system.html#megamenu-config>)

Note: When you see "Missing T3" error on the frontend.

T3 framework 2 based templates need the T3 Framework Plugin to be installed and enabled.

Now, we will go through the OSPT3Map template configuration:

Extension > Template managers > OSP Realestate

Enable Theme Magic

ThemeMagic is a real time theme customization tool supported by T3 Framework. It allows you to customize any theme without touching in the code.

Step 1: Enable ThemeMagic

In the General tab, enable ThemeMagic then access ThemeMagic's working panel by clicking on ThemeMagic.

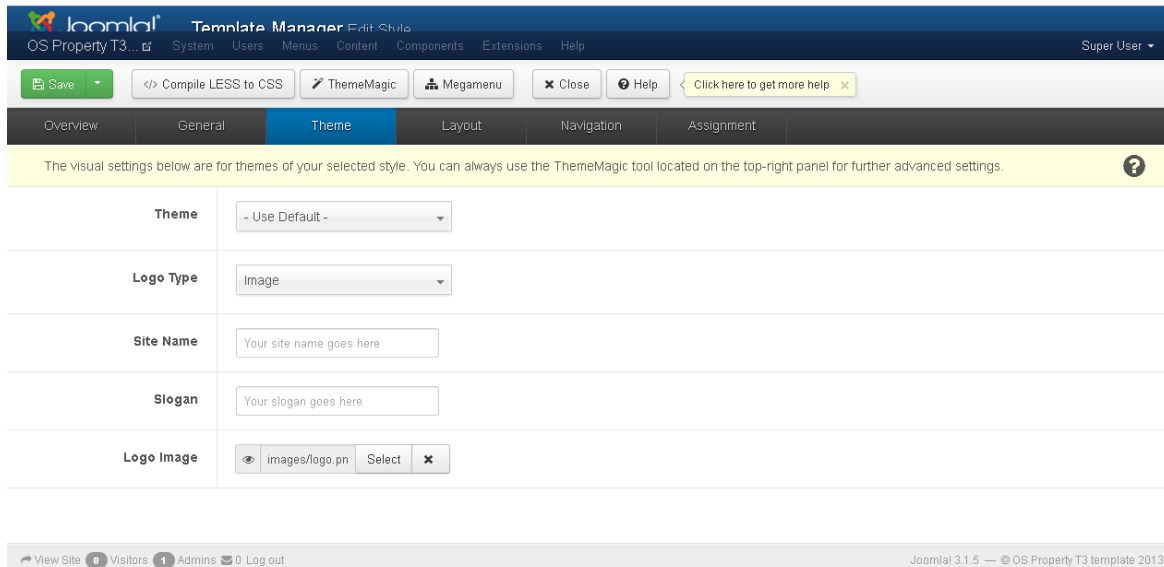

Step 2: Select the theme to customize

Tips: Once ThemeMagic is enabled, you can access ThemeMagic from your front-page by adding "?tm=1" after your site url (example: http://your_website.com/?tm=1)

You can read more about ThemeMagic at this page: <http://t3-framework.org/documentation/bs3-customization#theme-magic> or watching the tutorial at: <http://t3-framework.org/documentation/bs3-customization#theme-magic>

b. Theme

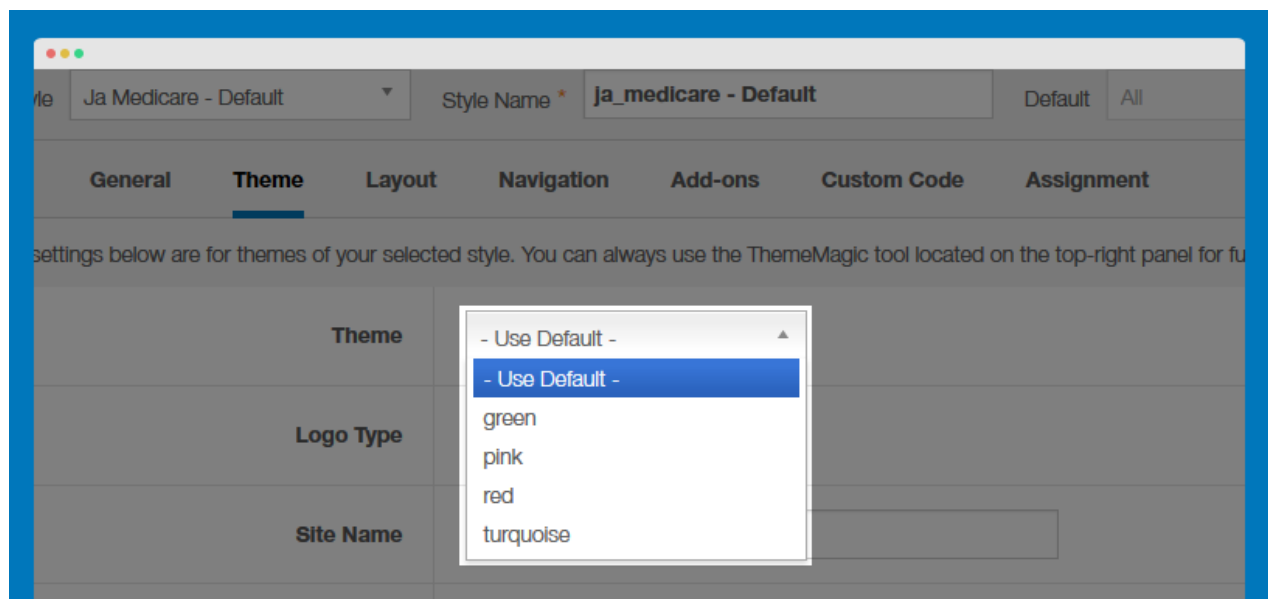

The screenshot shows the Joomla! Template Manager interface. The 'Theme' tab is selected in the top navigation bar. Below the tabs, there is a message: 'The visual settings below are for themes of your selected style. You can always use the ThemeMagic tool located on the top-right panel for further advanced settings.' The settings are as follows:

Setting	Value

There are 3 layouts that are used in the template. Select the style that you want to work on, then assign the layout for that style accordingly.

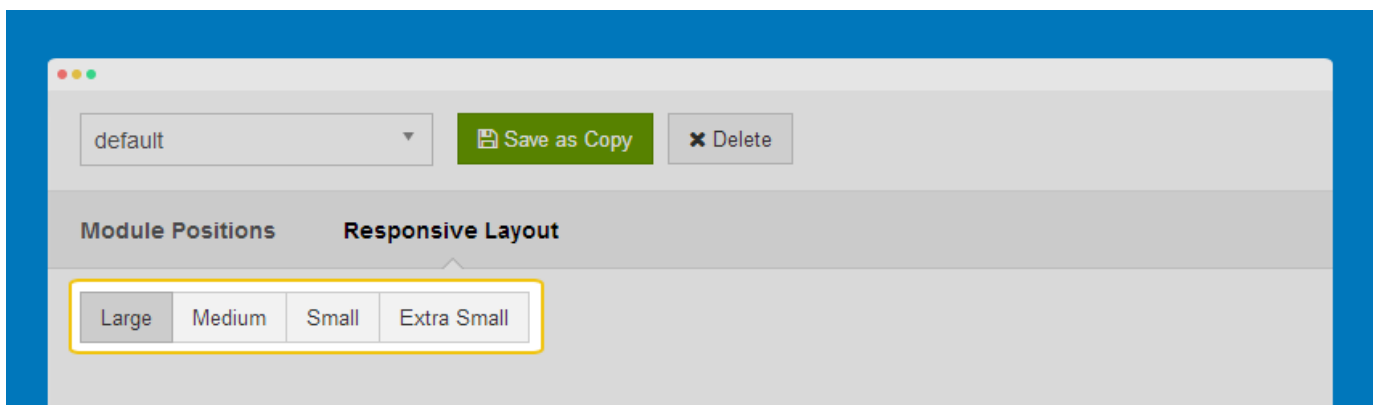

Here, you can change the layout structure, module positions in the layout, and more.

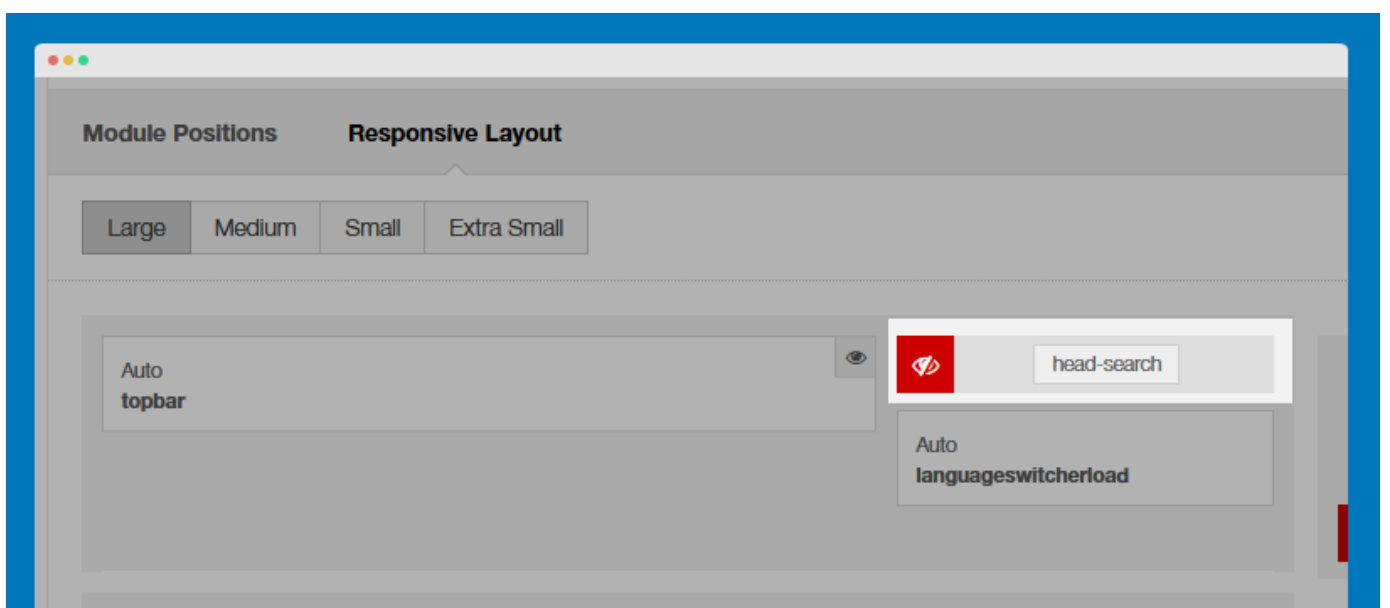

In the spotlight block, you can see the number of positions available.

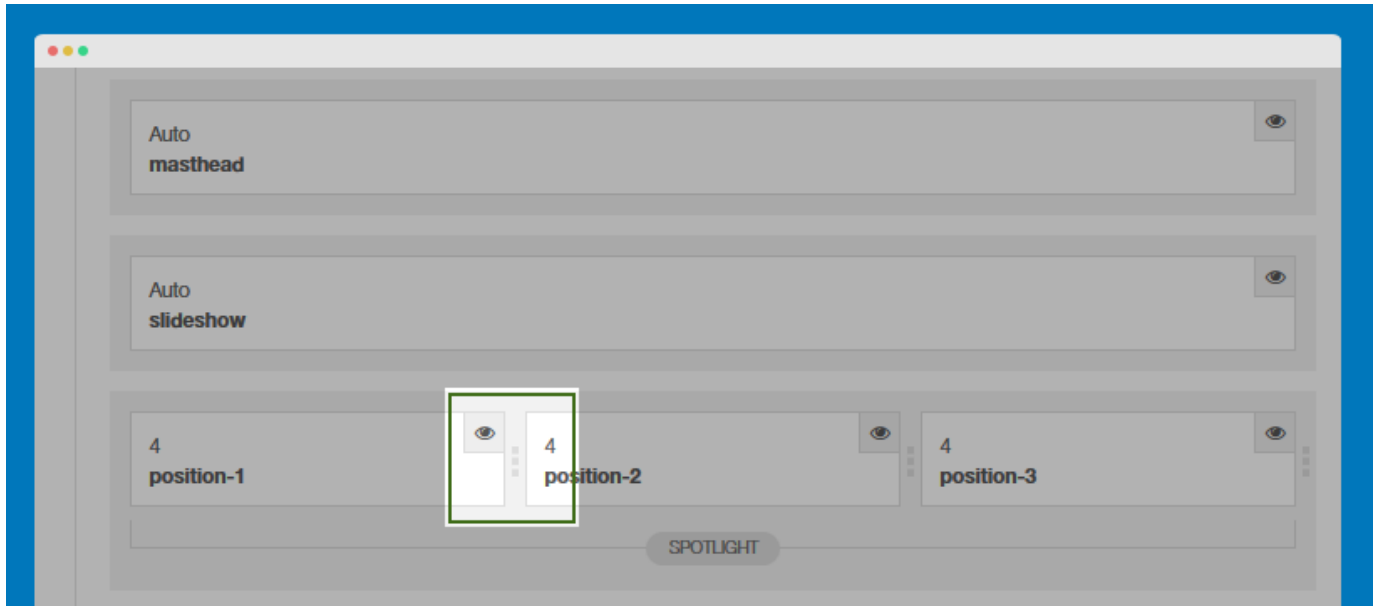

OSP Real Estate supports multiple responsive layouts. In the **Responsive layout**, select the layout you would like to configure.

In each responsive layout, you can disable any module position as you wish.

For module positions in the spotlight block, you can drag to resize.

T3 supports Megamenu that allows you to display your menu flexible. Arrange menu items in columns, adding any content to menu...

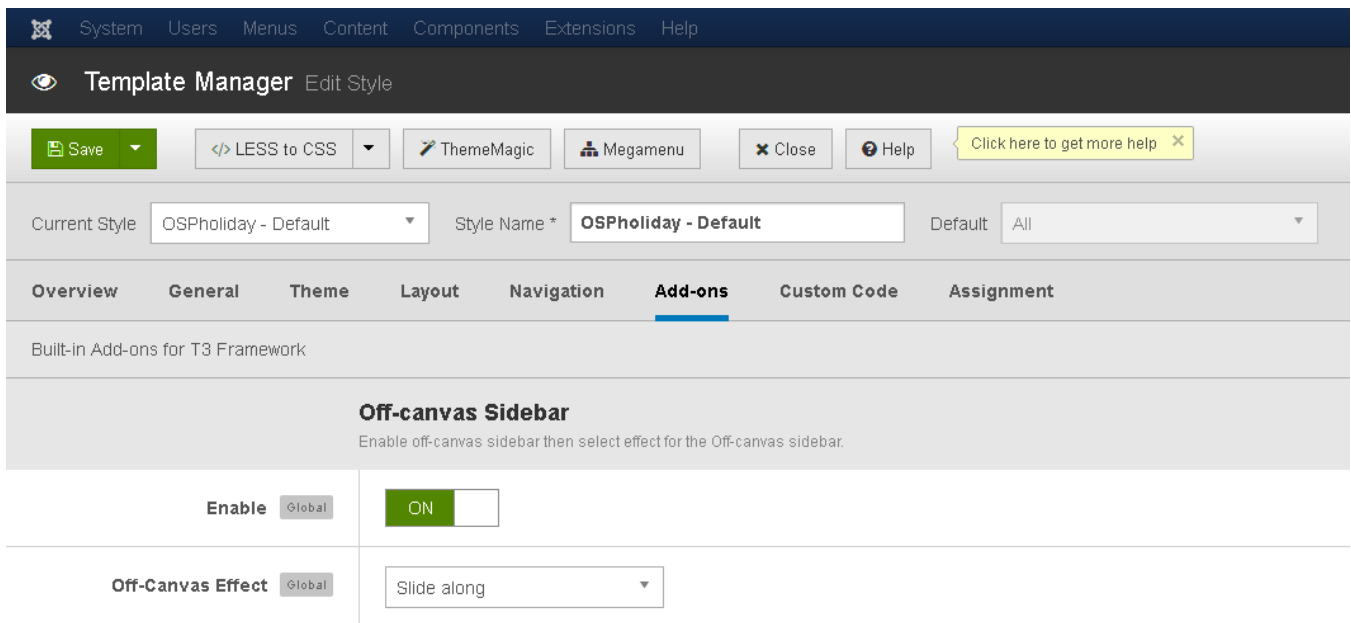

Please note that, the navigation settings are not global settings that mean in each style, it can have difference navigation. In each style, you can display different menus as main menu.

To enable **Megamenu**, please open **Navigation** tab. **Enable Megamenu**> option then open **Megamenu** configuration panel.

e. Add-ons

4. How to change logo in OSP Real Estate template

There are two ways to change the default logo in JA Medicare template.

#1 Upload your own logo

In order to change the logo in JA Medicare template, please follow the steps below:

- Log into your site back-end

- Navigate to Extensions >> Template Manager

- In Styles, choose OSP Realestate - Default

- In the menu section, click on "Theme" tab

- Make sure to choose Logo Type = Image

- Click on Select to browse and upload your 'Logo Image'

Click Save to complete the process.
Back to your home page, and refresh to see the change.

The screenshot shows the Joomla! ThemeMagic interface. At the top, there's a header with 'Current Style' set to 'Ja Medicare - Default' and 'Style Name' set to 'ja_medicare - Default'. Below this is a navigation bar with tabs: 'Overview', 'General', 'Theme' (which is selected), 'Layout', 'Navigation', 'Add-ons', 'Custom Code', and 'Assignment'. A message states: 'The visual settings below are for themes of your selected style. You can always use the ThemeMagic tool located on the top-right panel for further advanced'. The main settings area includes: 'Theme' set to '- Use Default -', 'Logo Type' set to 'Image', 'Site Name' set to 'Medicare', 'Slogan' set to 'Joomla Template for Medical', and 'Logo Image' with a preview of 'images/joomla' and buttons for 'Select' and 'X'.

Note:

In case you use multiple themes in the JA Medicare template.

In the Theme tab, navigate to the Theme field, then select the theme in which you want to change the logo.

Repeat all the steps above to change the logo image.

Don't forget to Save the changes.

This screenshot is identical to the one above, showing the Joomla! ThemeMagic interface with the 'Theme' tab selected. The settings are: 'Theme' set to '- Use Default -', 'Logo Type' set to 'Image', 'Site Name' set to 'Medicare', 'Slogan' set to 'Joomla Template for Medical', and 'Logo Image' with a preview of 'images/joomla' and buttons for 'Select' and 'X'.

#2 Use custom CSS

Set your logo's dimensions to the standard size (xxx) and name it as

[your_site_name].png

Upload the logo file to the folder [root]/templates/ osprealestate /images/

Create a CSS file named custom.css in the following folder

/your site/templates/osprealestate/css/

If the logo size is not fit with your site's look and feel, you can change its size with additional styling code:

Adding a new class as .logo-image {}

For example:

```
.logo-image {  
width: logo-width;  
height: logo-height;  
background:
```

```
url("your-site/ja_medicare/templates/ja_medicare/images/your-site-logo.png")  
no-repeat / 100% auto;  
}
```

```
.logo-image img { display: none;}
```

Save, and then refresh your site to see the change.

If your new logo does not appear, please follow these steps:

Log into your site back-end

Navigate to Extensions >> Template Manager

Select your template style, then click on the tab "Theme" in the menu.

In "Logo Image", click on "X" to clear the field.

Click Save then repeat all the above steps for your other template styles.

Go to front-end to see your new logo

How to customize your uploaded logo

Small Logo

To properly display on mobile/tablet or other collapsed screens, the default logo will be replaced by a small logo.

Overview General **Theme** Layout Navigation Add-ons Custom Code Assignment

The visual settings below are for themes of your selected style. You can always use the ThemeMagic tool located on the top-right panel for further advanced settings.

Theme	- Use Default -
Logo Type	Image
Site Name	Medicare
Slogan	Joomla Template for Medical
Logo Image	 Select X
Enable Small Logo	<input checked="" type="checkbox"/> ON
Small Logo Image	 Select X

Enable: On

The small logo uploaded by user will be used. In case no logo is selected in the Small Logo Image field, the default logo will be used. And how it's look

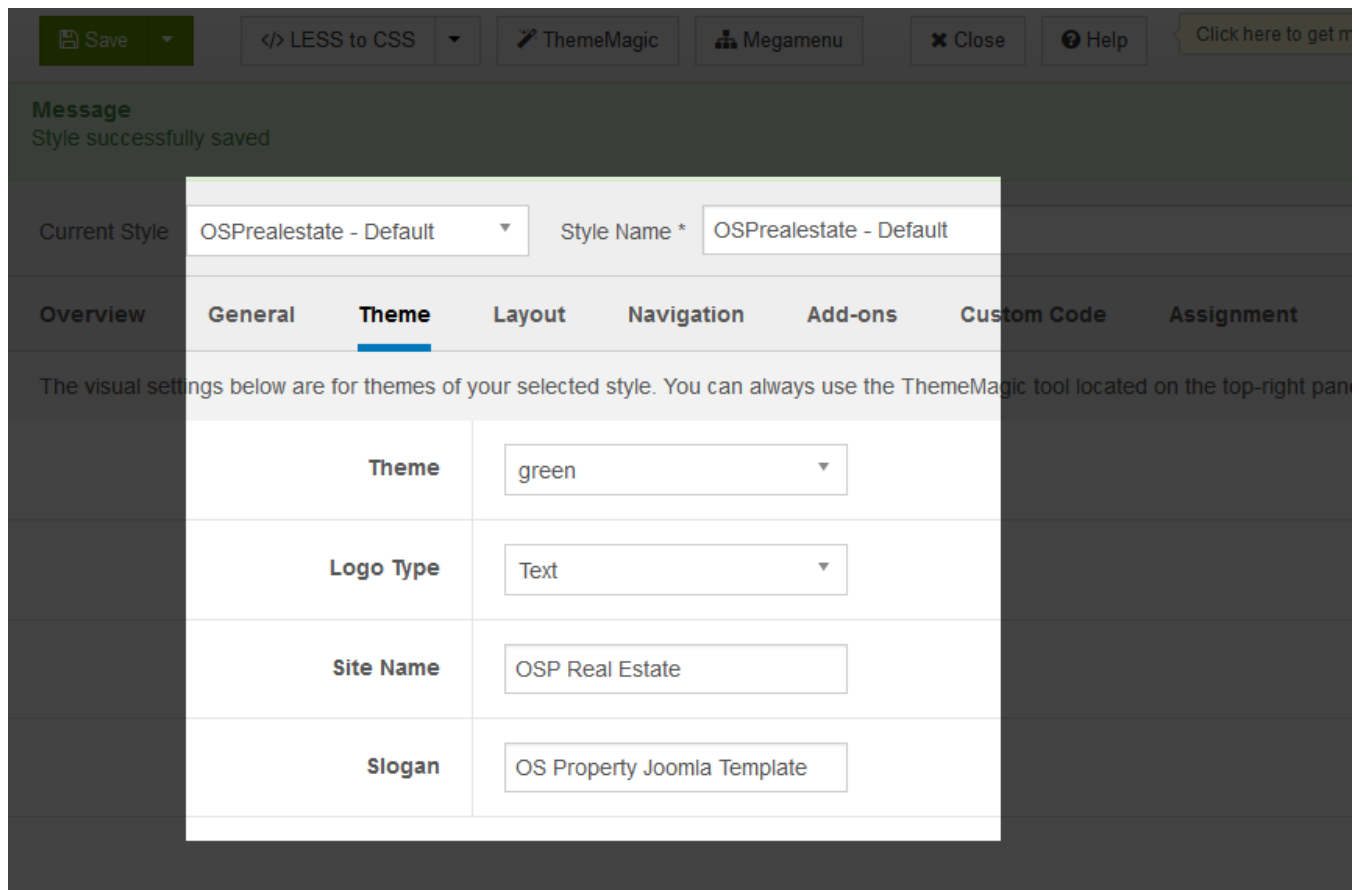

Enable: Off

The default logo will be used.

Logo type = text

If you don't want to use a graphic logo, you can always choose the option Text in Logo Type field.

You will have a beautiful Text Logo in OSP Real estate template.

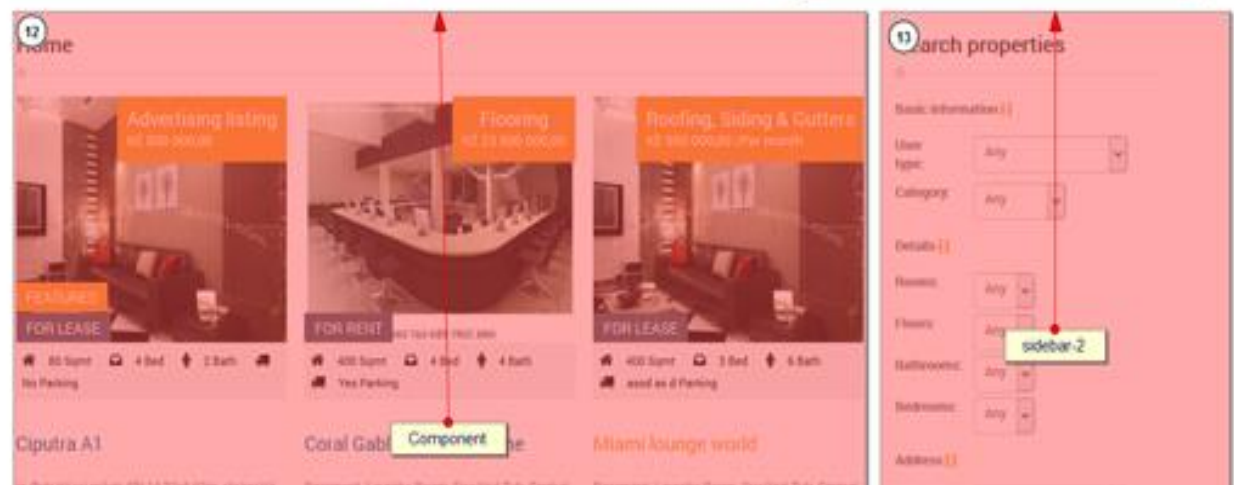

OSP Real Estate

OS Property Joomla Template

5. Installing complimentary / included extensions and Demo configuration

Custom HTML Modules : To match the design of the template, we also style (CSS) for Custom HTML modules using different div classes. You will need to check the HTML codes and make sure to use the recommended HTML markup to get correct display. We provide the HTML code in this user guide.

II. Know your Module Positions

III. Installation: Modules Configuration

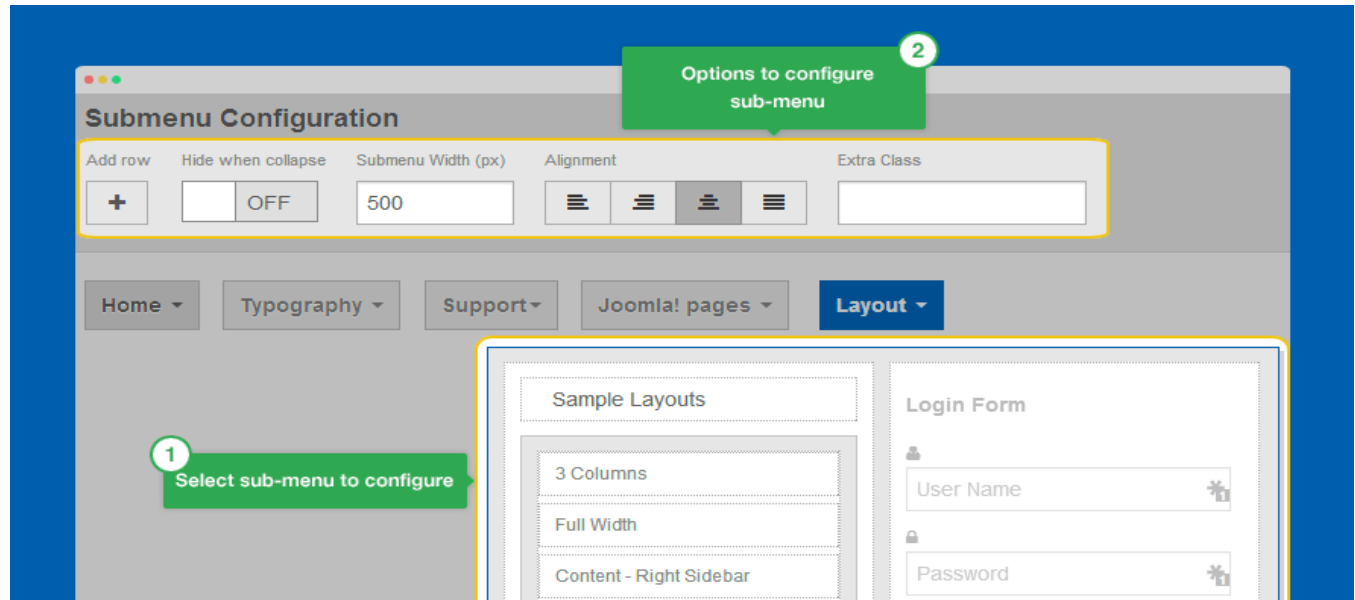

Overview:

When you install modules of in the package, all the module parameters will have pre-defined values. So in this part, we only list all important parameters of modules, you will need setup those parameters to make it like the demo of template

1. Menu Configuration

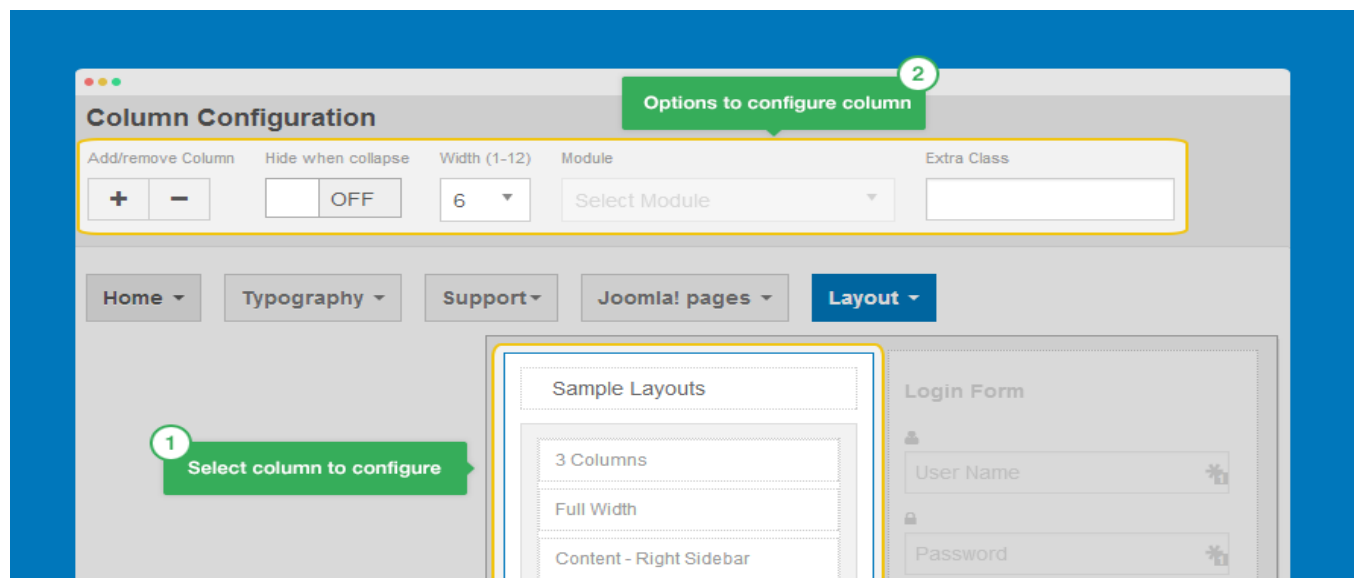

There are 3 levels of configuration that you should know: Submenu setting, Column setting and Menu item setting.

a. Sub-megamenu setting

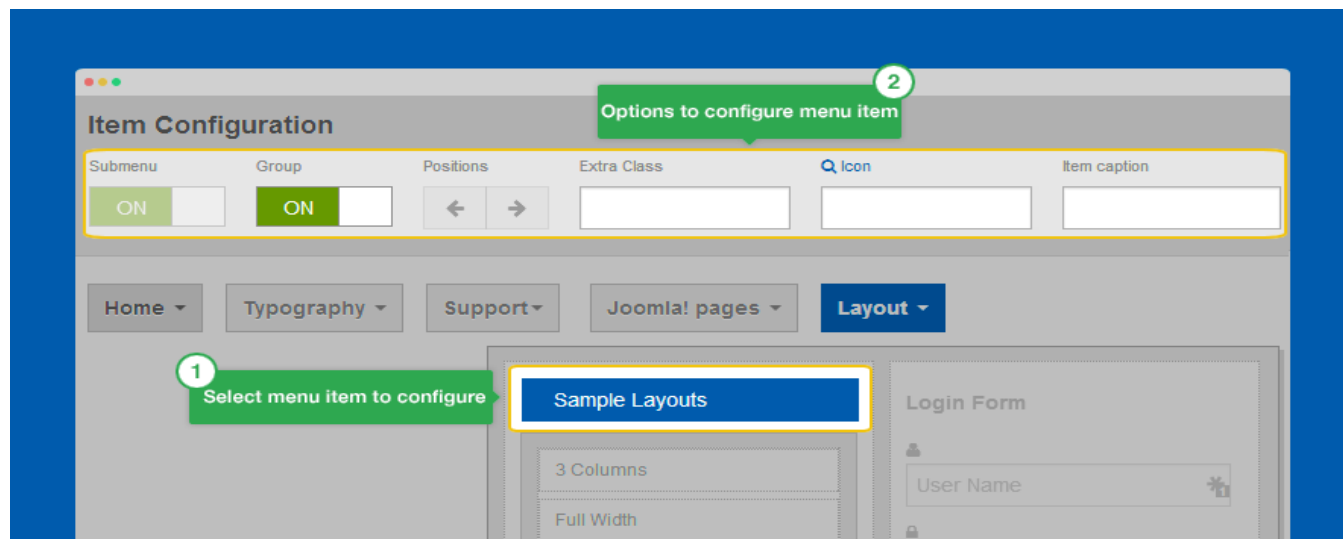

This setting allows you to configure the width of the sub-megamenu, add column, and add class that style for it.

b. Column Setting

In this level of configuration, you can: Add column, remove column, set width of column, assign module to column.

c. Menu Item

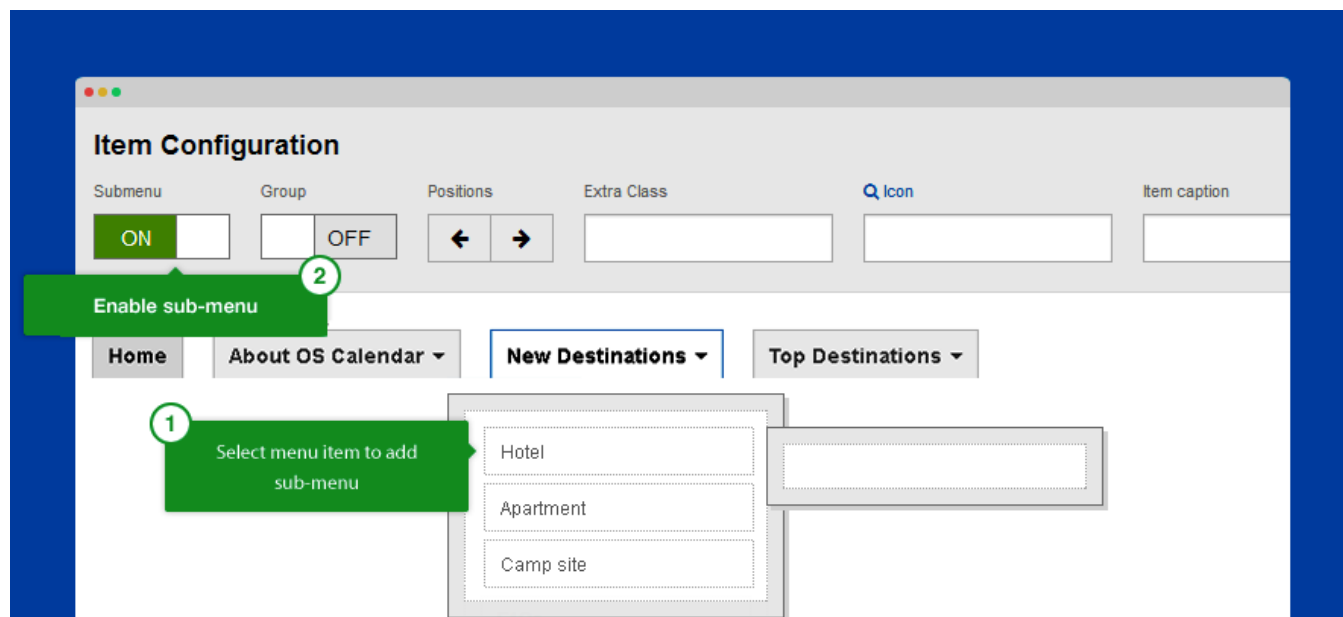

In this level of configuration, you can: enable or disable submenu if a menu item, display sub-menus in group or not, move menu item to right or left, assign a module to a module menu item, add icon for menu item.

Megamenu options

1.1. Enable Submenu

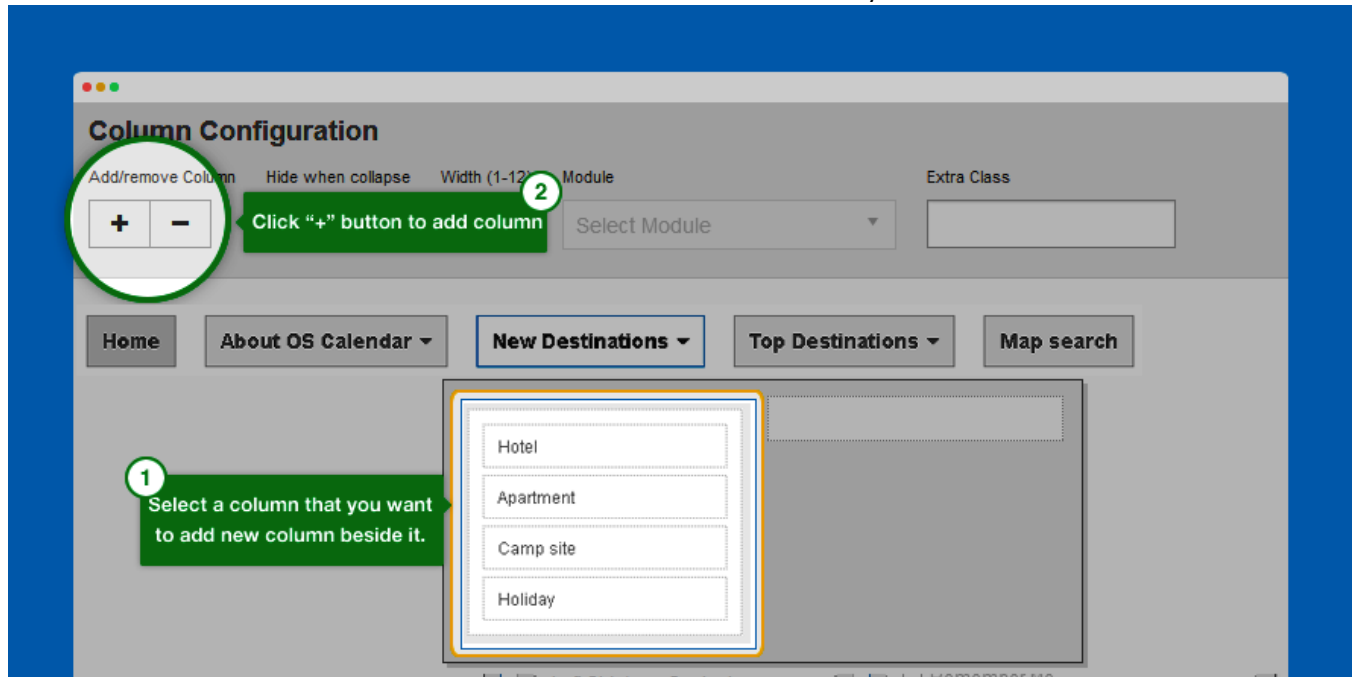

This is option is to show or hide submenu of a parent menu. If a menu does not have submenu, when you enable this option, it allows you to add new submenu and add content to the submenu.

To add submenu, click on menu that you want to add submenu (you can only add submenu for a menu that has no child menus).

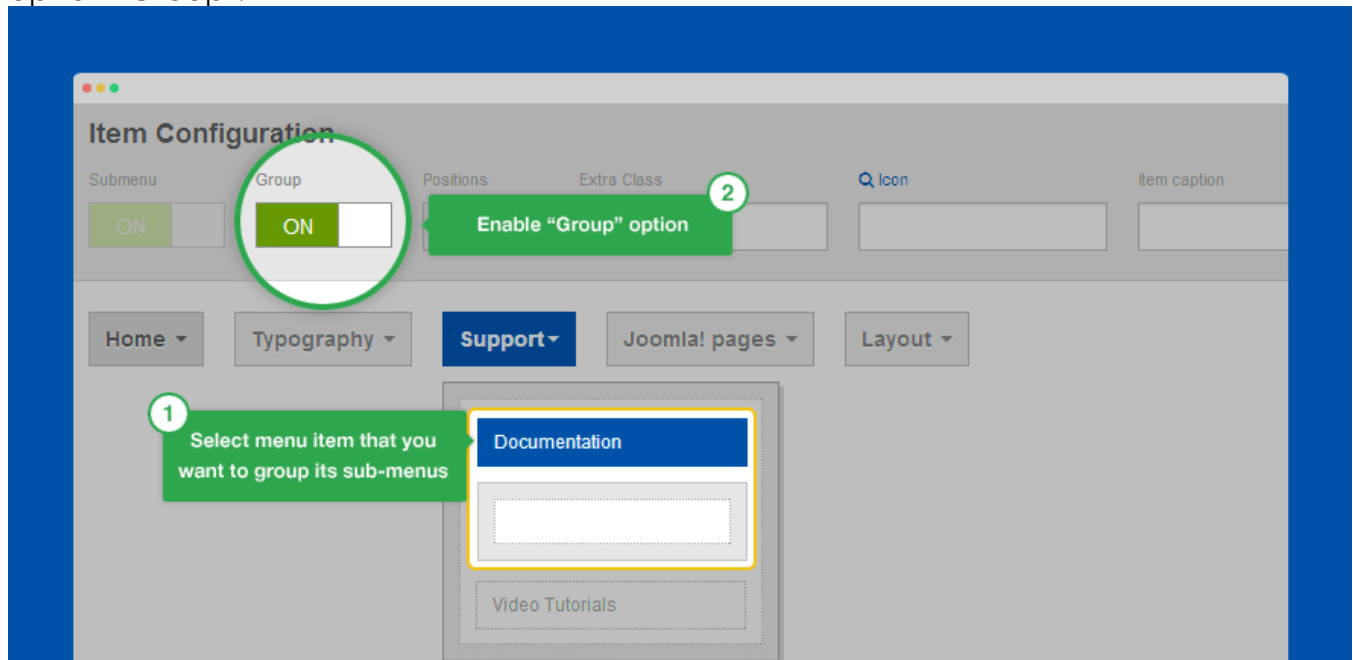

1.2 Add new column/row

You can add new column or row for a selected column/row.

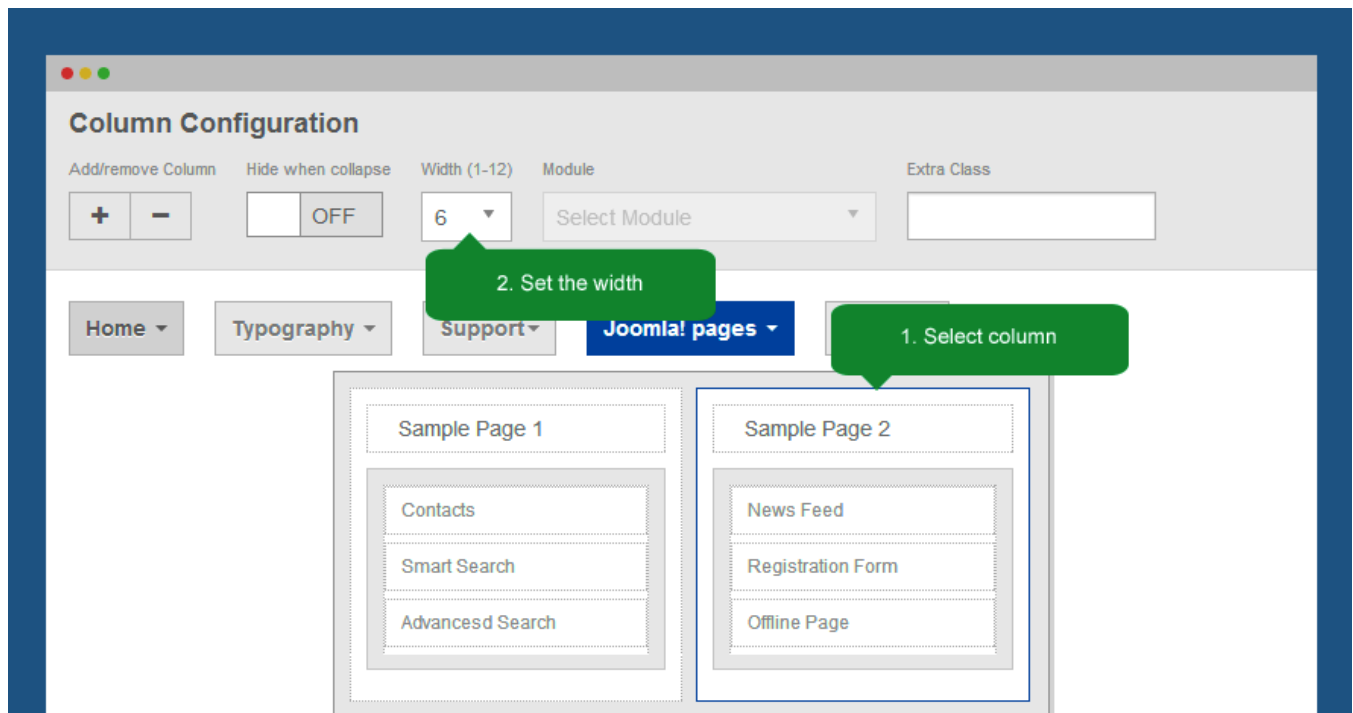

1.3. Group submenu or not

You can group submenus of any menu item by selecting the menu item then enable option "Group".

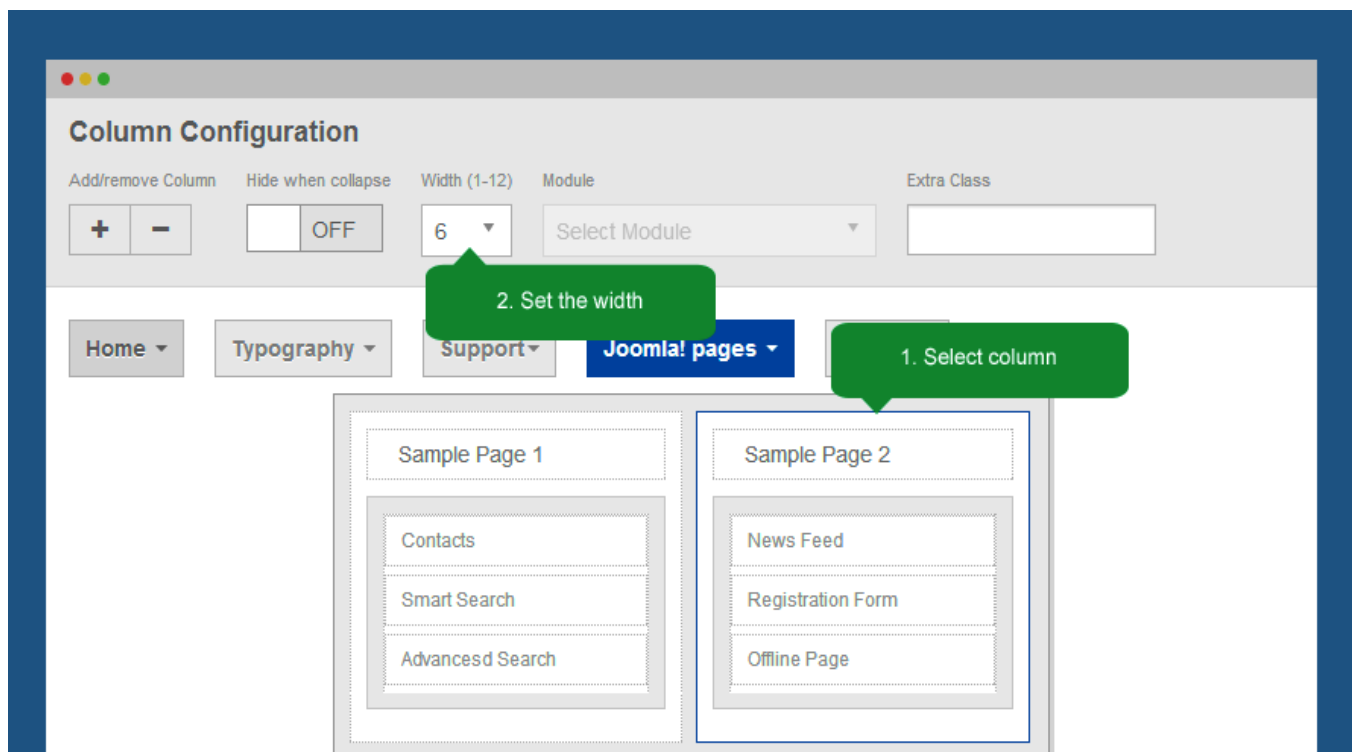

1.4. Resize submenu and column width

T3 allows you to change size of submenu. Select the submenu then change its size in pixel.

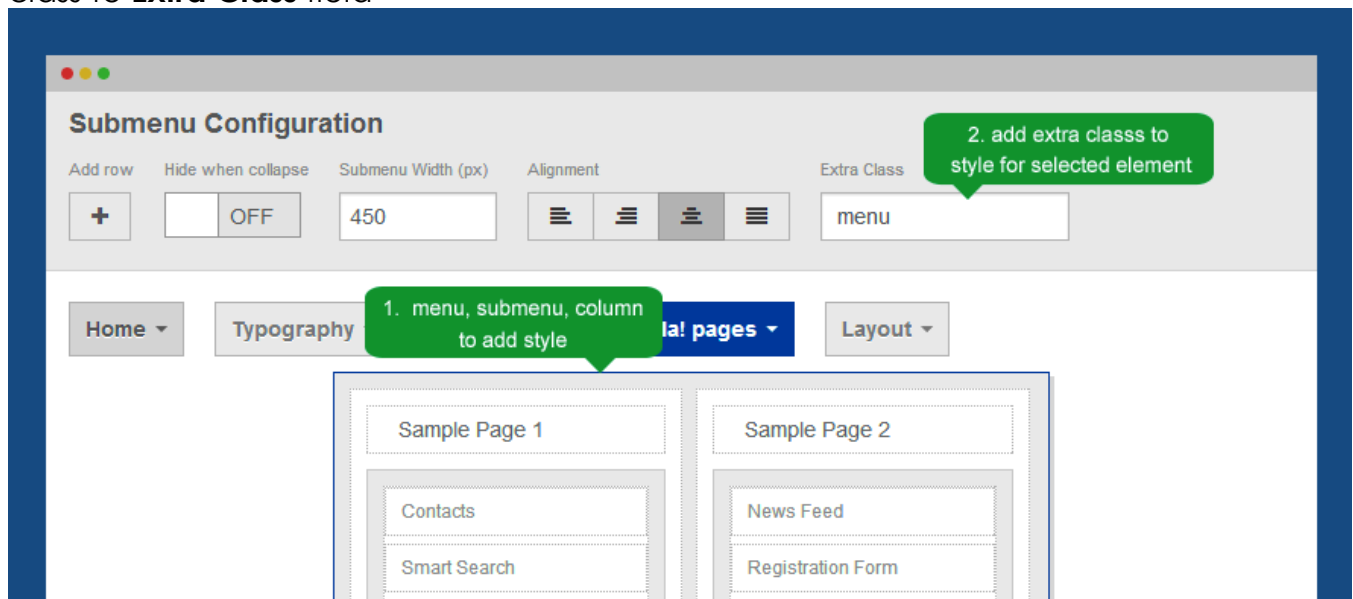

After changing size of the submenu, you can change size of a column, select the column and set the Width (total is 12).

1.5. Style Megamenu

You can style for any level of Megamenu: menu item, column, submenu by adding a class to **Extra Class** field

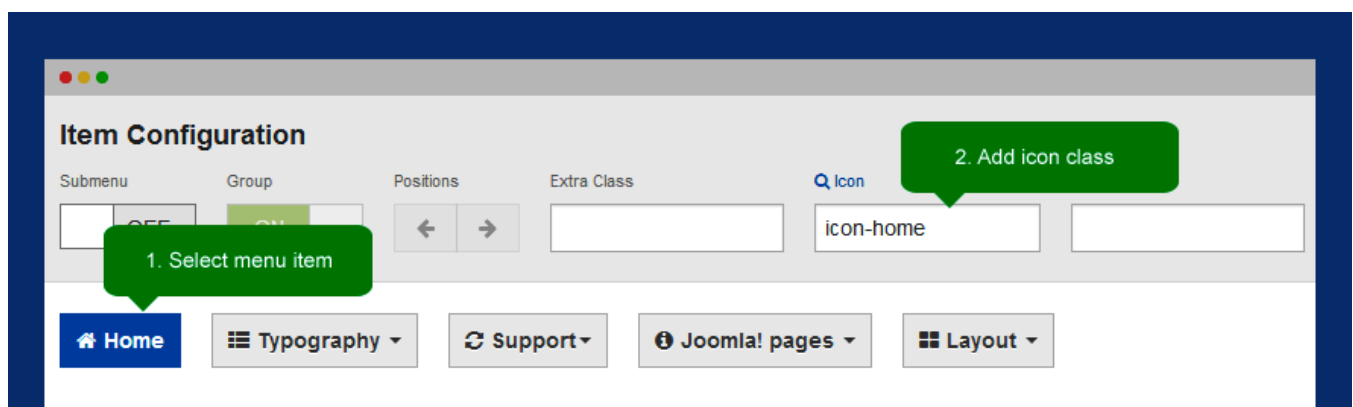

1.6. Add icon for menu item

There are 2 ways to add icons to the menus.

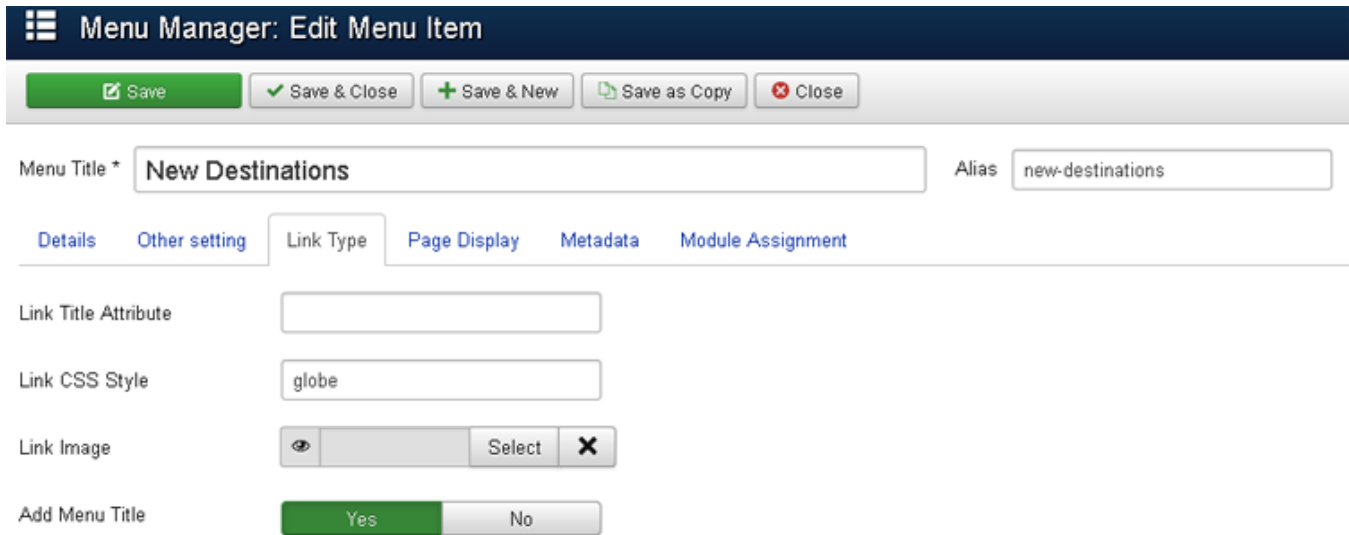

a. Using megamenu

You can add class to define icon that you want to add to menu item, or you can use classes of Bootstrap and Font awesome

1. [Bootstrap 3 icon list](#)
2. [Font Awesome 4 icon list](#)

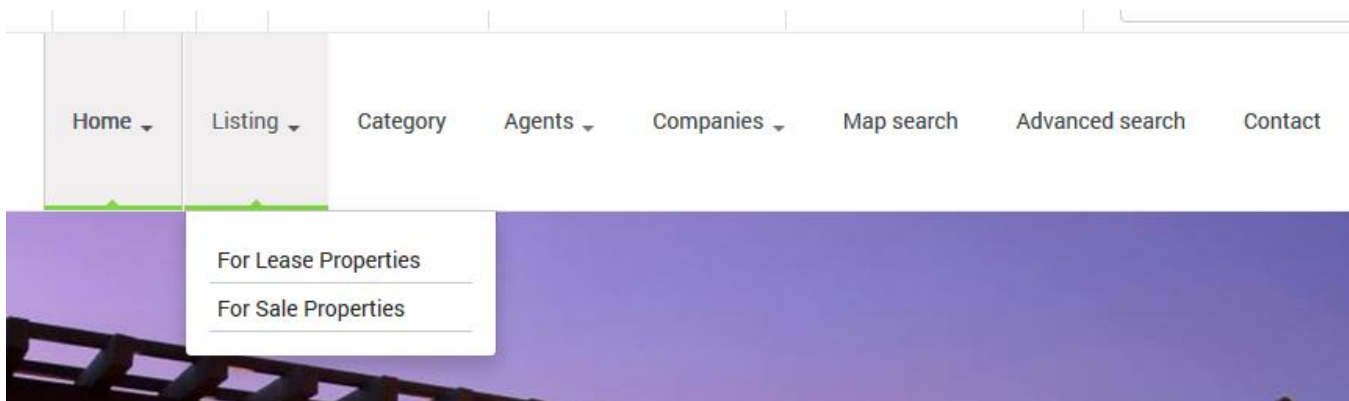

b. Using Joomla menus

The screenshot shows the Joomla! Menu Manager interface for editing a menu item. The title bar reads "Menu Manager: Edit Menu Item". Below the title bar are five buttons: "Save" (green), "Save & Close" (green with a checkmark), "Save & New" (green with a plus), "Save as Copy" (green with a document icon), and "Close" (red with an X). The "Menu Title" field is set to "New Destinations" and the "Alias" field is set to "new-destinations". Below these fields are five tabs: "Details", "Other setting", "Link Type", "Page Display", "Metadata", and "Module Assignment". The "Link Type" tab is selected. Under this tab, there are four fields: "Link Title Attribute" (empty), "Link CSS Style" (set to "globe"), "Link Image" (with an eye icon, a "Select" button, and a close button), and "Add Menu Title" (with "Yes" and "No" buttons).

And here is the result at front-end

2. JM Slideshow (Non-commercial slideshow extension)

Author: Joomlaman

Url: <http://www.joomlaman.com/joomla-extensions/22-jm-slideshow.html>

Overview:

With JMS module, you can create slideshow on a site which include various images and article fragments or texts defined by a user. Thanks to slide management system integrated in the module, its support is very easy, intuitive and fast. With the new method of creating module styles you can easily move your slideshow style from one template to other template.

Documentation:

<https://www.youtube.com/watch?v=hZqFitZbBBI>

Compatible:

Almost browsers like IE 9, 10, Firefox, Opera, and Chrome. We noted some errors of this slideshow module in IE browser.

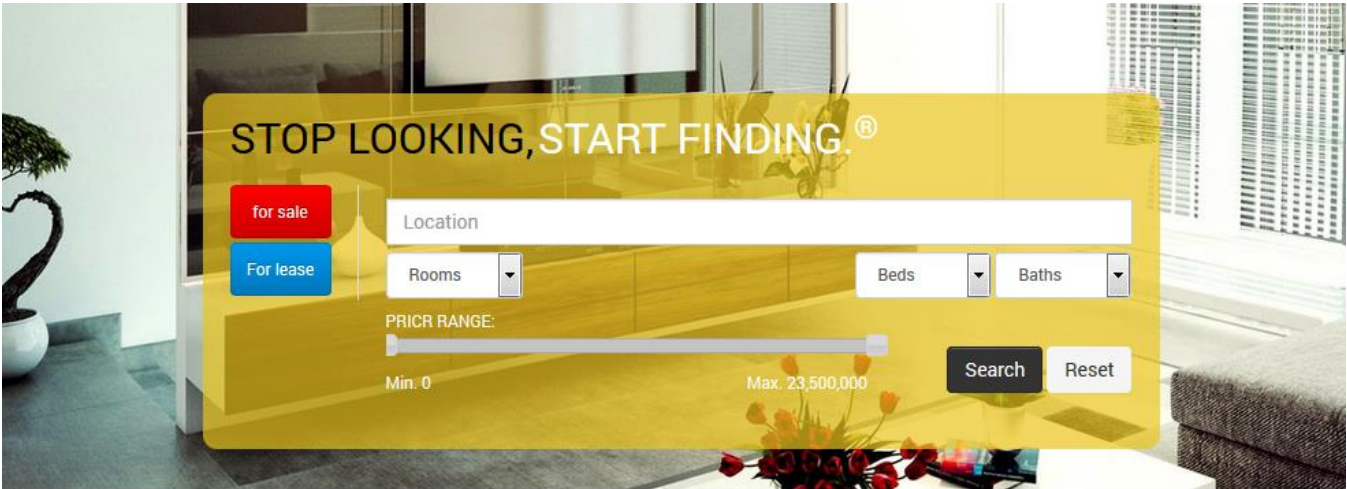

Field name	Suggest Field value	Description
Position	Slideshow	
Basic Option		
Responsive	Yes	
Image Width	700	Pixels
Image Height	400	Pixels
Image Style	Fit	
Source Options		
Slider Source		<p>You can select one of options: Joomla Categories, Special Article IDs, Featured Articles, and From Directory.</p> <p>With Joomla Categories, you need to select categories of Joomla at the dropdown list.</p> <p>With Special Article IDs, you need to enter ID of Articles, separated by colon.</p>

Note: You can use other slideshow if you want, or you can use [OS Property slideshow](#) to show properties on the slideshow.

3. OS Quick Search module

This is quick search module of **OSP Real Estate** template, but it is used to search properties from **OS Property** extension

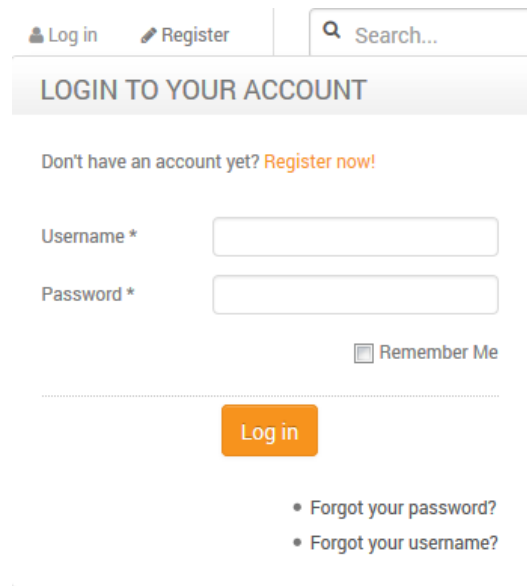

Os quick search module at front-end

Os quick search module at back-end

Position	advance-search
Property types	

4. BT Login module

The screenshot shows the front-end of the BT Login module. At the top, there are links for 'Log in' and 'Register', and a search bar. Below this is a section titled 'LOGIN TO YOUR ACCOUNT'. Inside this section, there is a link 'Don't have an account yet? Register now!'. Below that are input fields for 'Username *' and 'Password *'. A 'Remember Me' checkbox is located below the password field. A large orange 'Log in' button is centered below the input fields. At the bottom of the section, there are two links: 'Forgot your password?' and 'Forgot your username?'.

Module Menu Assignment Module Permissions Options Advanced

Prepare Content Yes No

Select a Background-Image Select X

On this tab there is a list of menu items. You can choose between On All Pages, No Pages, Only on the pages selected and on all pages except those selected from the List.

If the latter two options are selected a list will show with all the menu items on as shown in the screenshot above. This allows you to assign modules to some but not all pages, and by selecting the menu links that you want the module associated with you can customize on what pages modules appear/don't appear.

On above part, we have mentioned a bit in Custom HTML module in Joomla. Now, we come back to Custom HTML modules of **OSP Realestate** template. All content of custom HTML modules of template will be shown in bellow parts. But to create the Custom HTML module with those HTML content, you must follow these steps:

1. Module Making Money

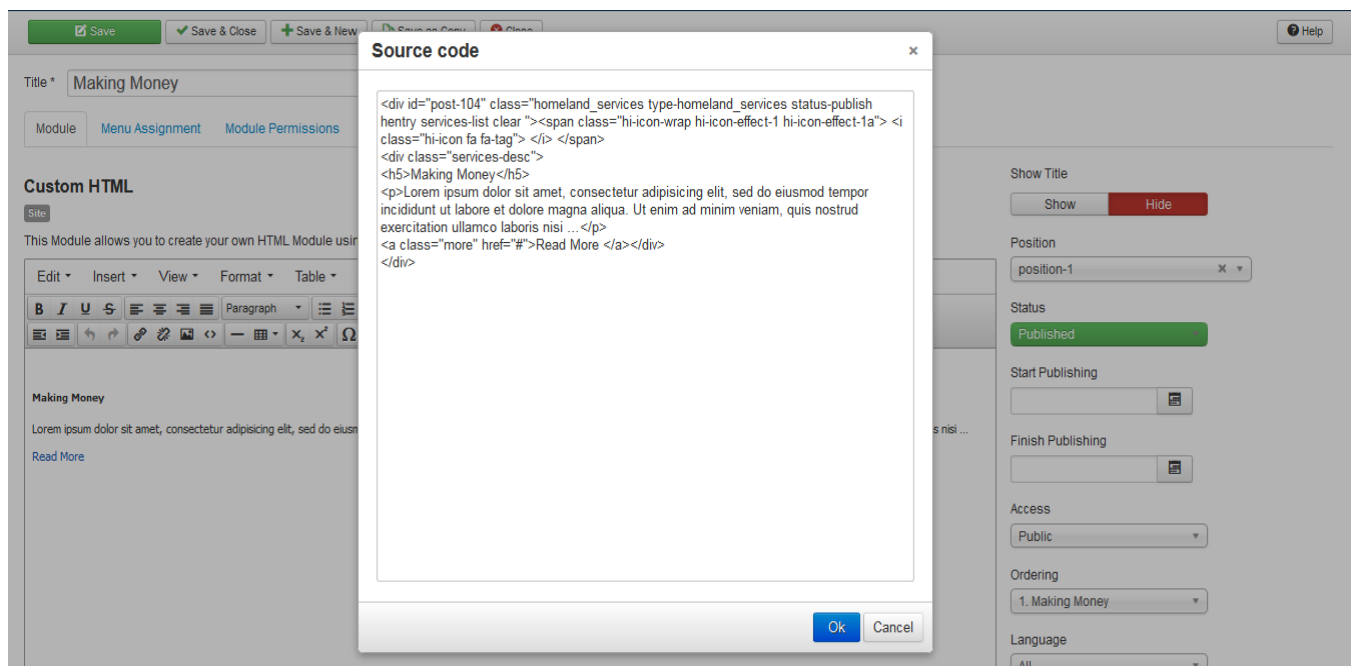

Display front-end

Position: **position-1**

Custom HTML:

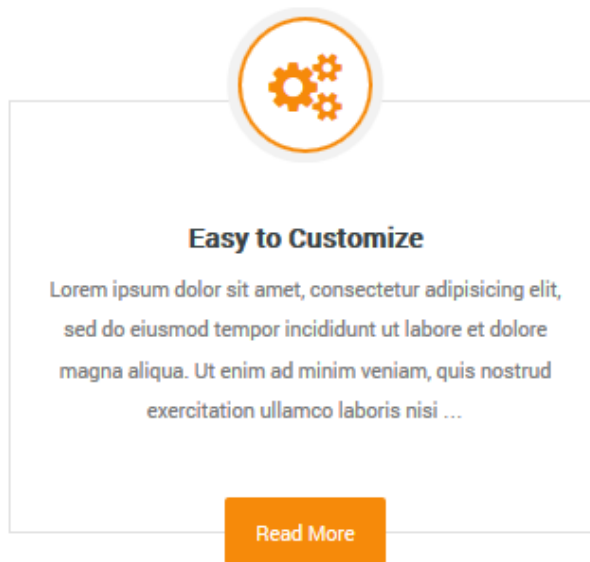

Click on Tools > Source code

HTML CODE:

```
<div id="post-104" class="homeland_services type-homeland_services status-publish hentry services-list clear "><span class="hi-icon-wrap hi-icon-effect-1 hi-icon-effect-1a"> <i class="hi-icon fa fa-tag"> </i> </span>
<div class="services-desc">
<h5>Making Money</h5>
<p>Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ...</p>
<a class="more" href="#">Read More </a></div>
</div>
```

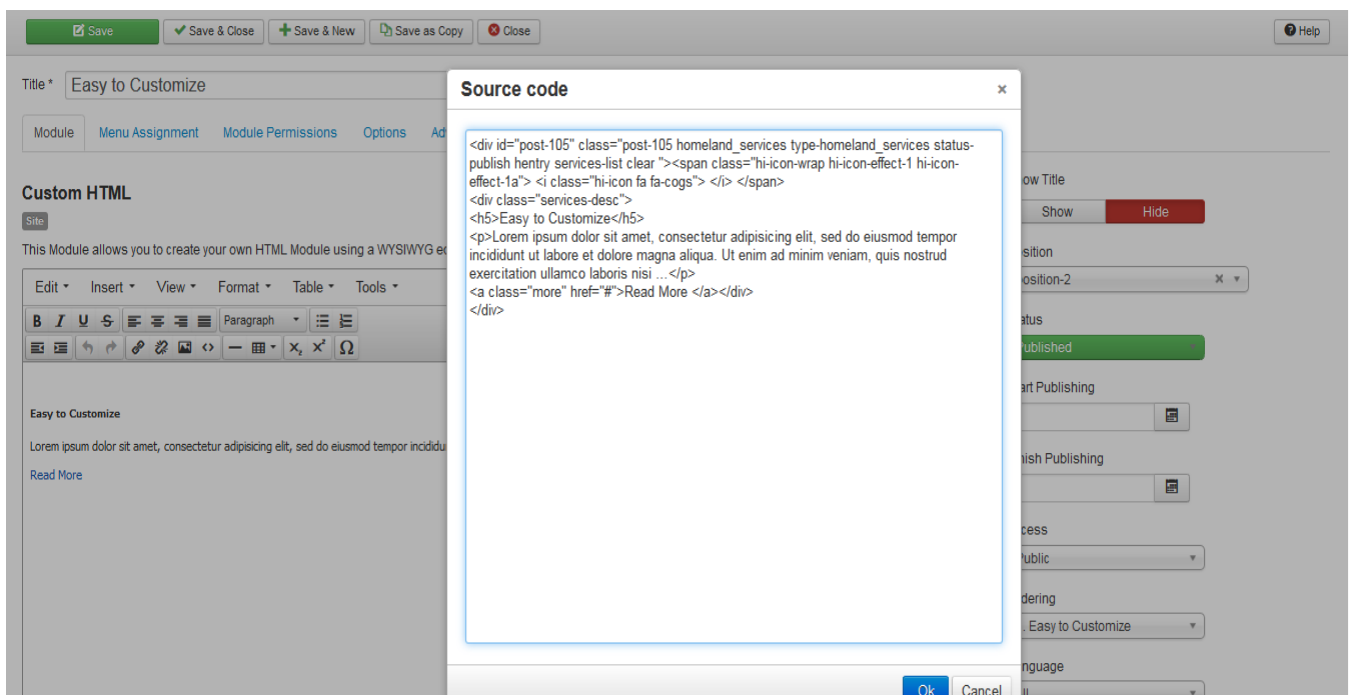

2. Module Easy to Customize

Position: **position-2**

Custom HTML:

Click on Tools > Source code

HTML CODE:

```
<div id="post-105" class="post-105 homeland services type-homeland services status-publish hentry services-list clear "><span class="hi-icon-wrap hi-icon-effect-1 hi-icon-effect-1a"> <i class="hi-icon fa fa-cogs"> </i> </span>
<div class="services-desc">
<h5>Easy to Customize</h5>
<p>Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ...</p>
<a class="more" href="#">Read More </a></div>
</div>
```

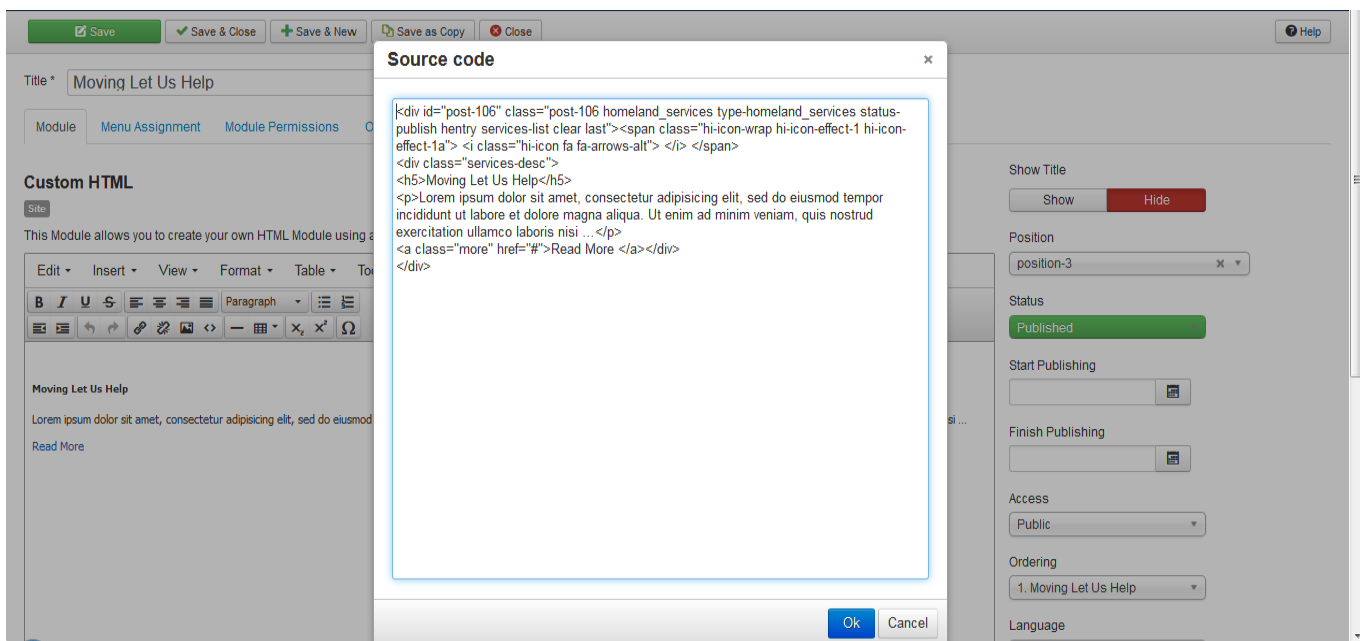

3. Module Moving Let Us Help

Position: **position-3**

Custom HTML:

Click on Tools > Source code

HTML CODE:

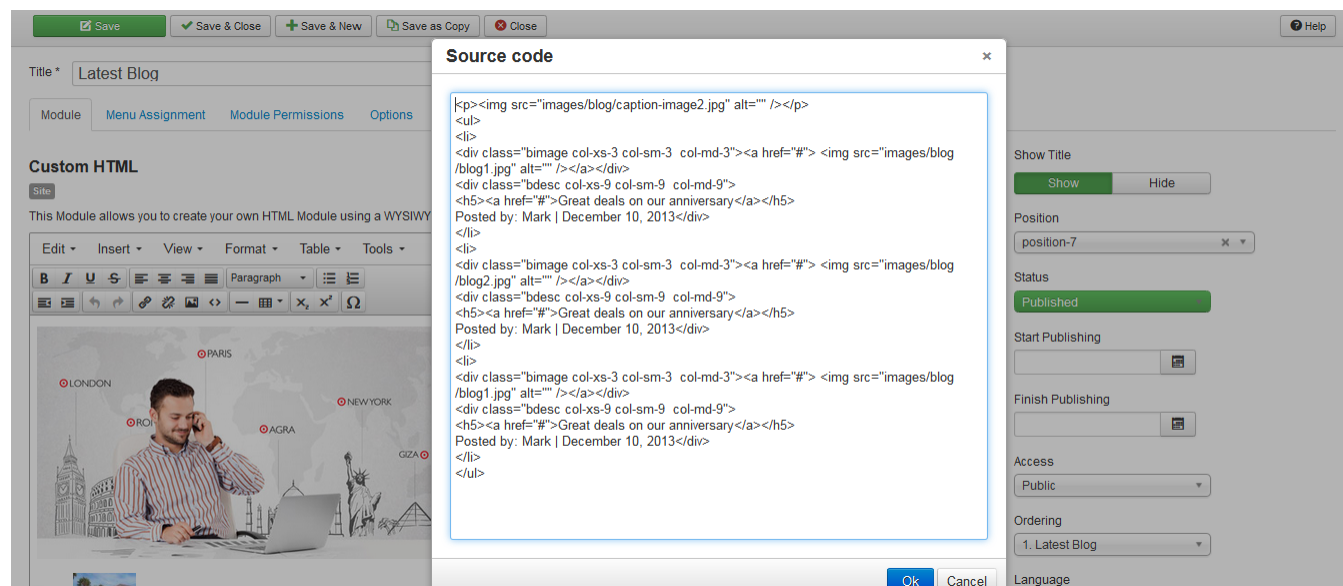

```
<div id="post-106" class="post-106 homeland_services type-homeland_services status-publish hentry services-list clear last"><span class="hi-icon-wrap hi-icon-effect-1 hi-icon-effect-1a"> <i class="hi-icon fa fa-arrows-alt"> </i> </span>
<div class="services-desc">
<h5>Moving Let Us Help</h5>
<p>Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ...</p>
<a class="more" href="#">Read More </a></div>
</div>
```

4. Module Latest Bog

Position: **position-7**

Custom HTML:

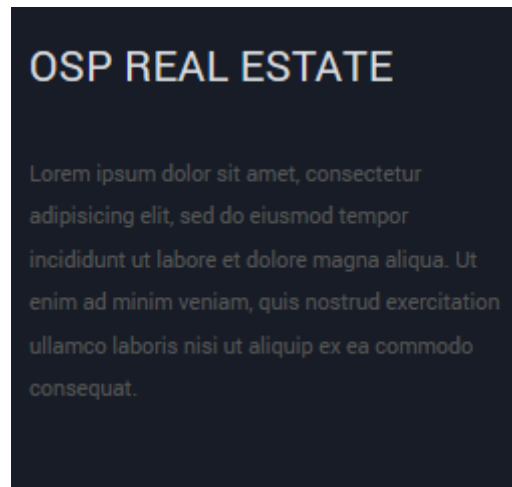

Click on Tools > Source code

HTML CODE:

```
<p></p>
<ul>
<li>
<div class="bimage col-xs-3 col-sm-3 col-md-3"><a href="#"> </a></div>

</li>
</ul>
```

5. Module Osp real estate

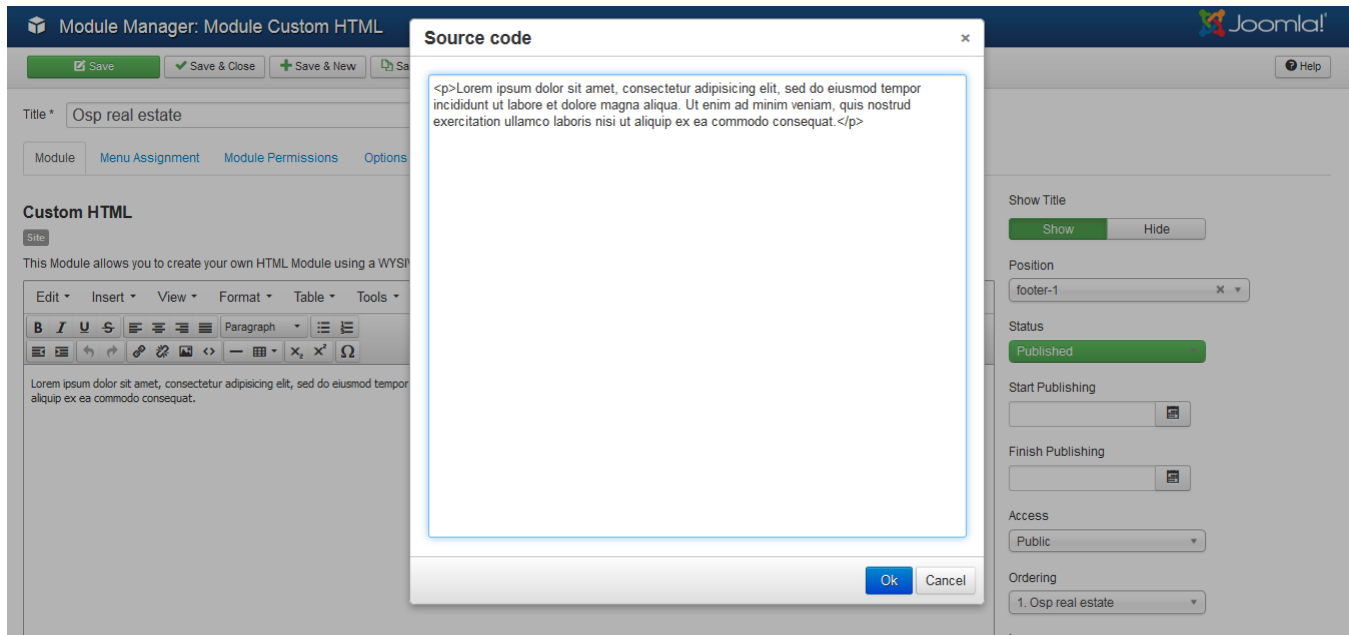

Position: **footer-1**

Custom HTML:

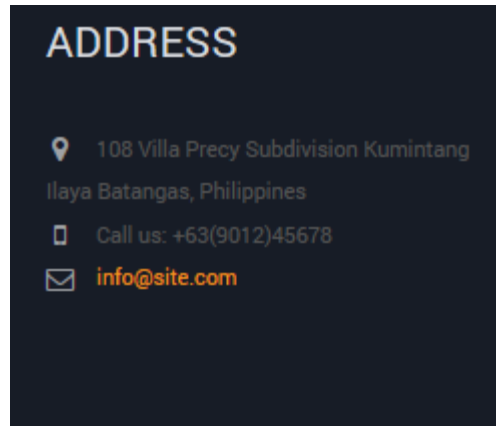

Click on Tools > Source code

HTML CODE:

```
<p>Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor
incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud
exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.</p>
```

6. Module Address

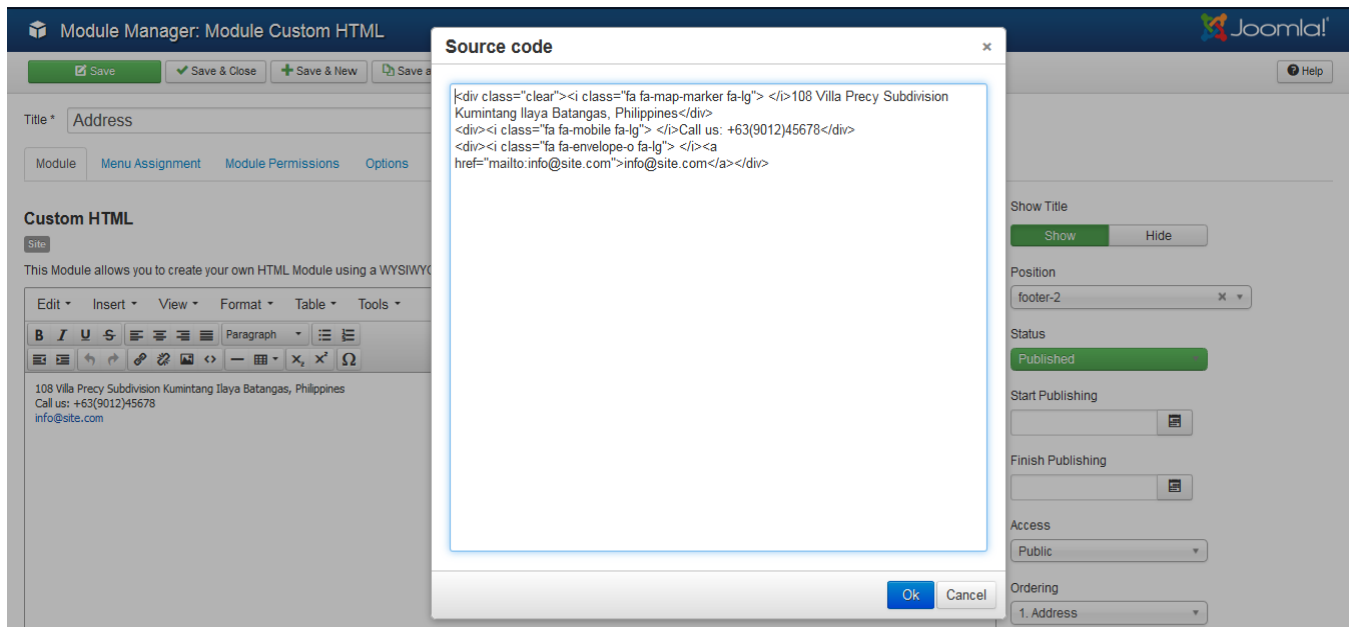

Position: **footer-2**

Custom HTML: Click on *Tools* > *Source code*

HTML CODE:

```
<div class="clear">108 Villa Precy Subdivision Kumintang Ilaya Batangas,
Philippines</div>
<div>Call us: +63(9012)45678</div>
<div><a href="mailto:info@site.com">info@site.com</a></div>
```

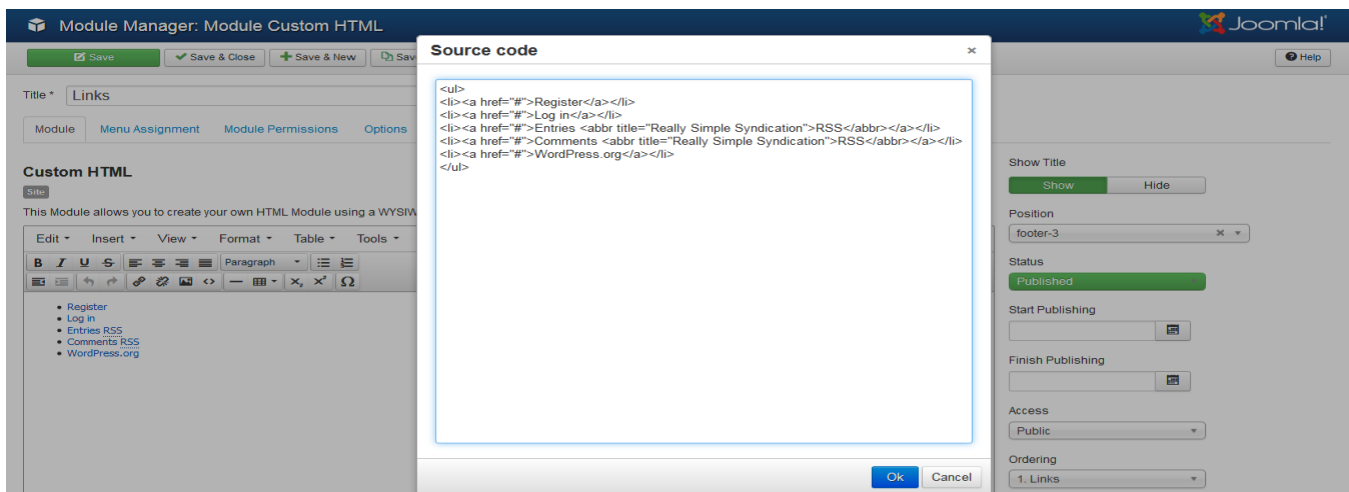

7. Module Links

Position: **footer-3**

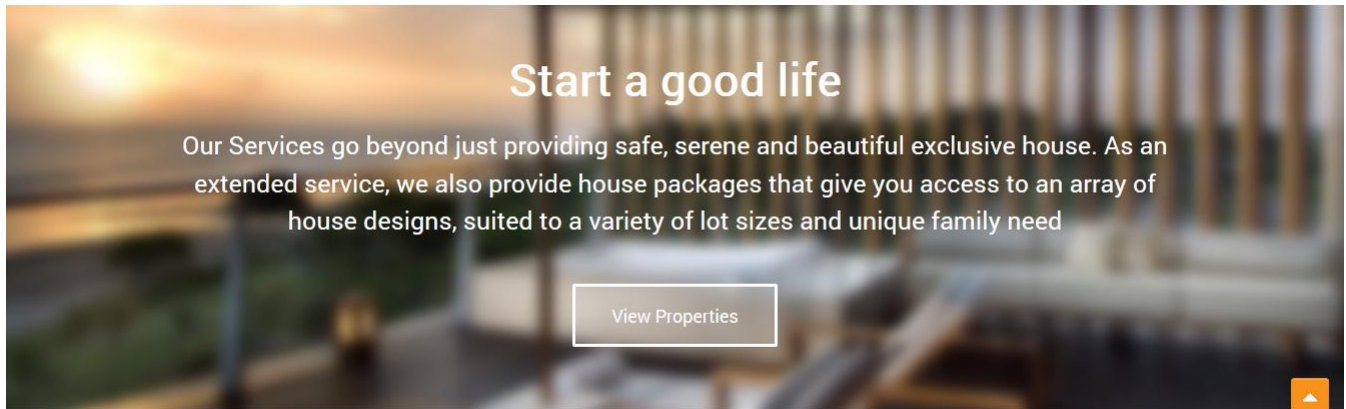

Custom HTML: *Click on Tools > Source code*

HTML CODE:

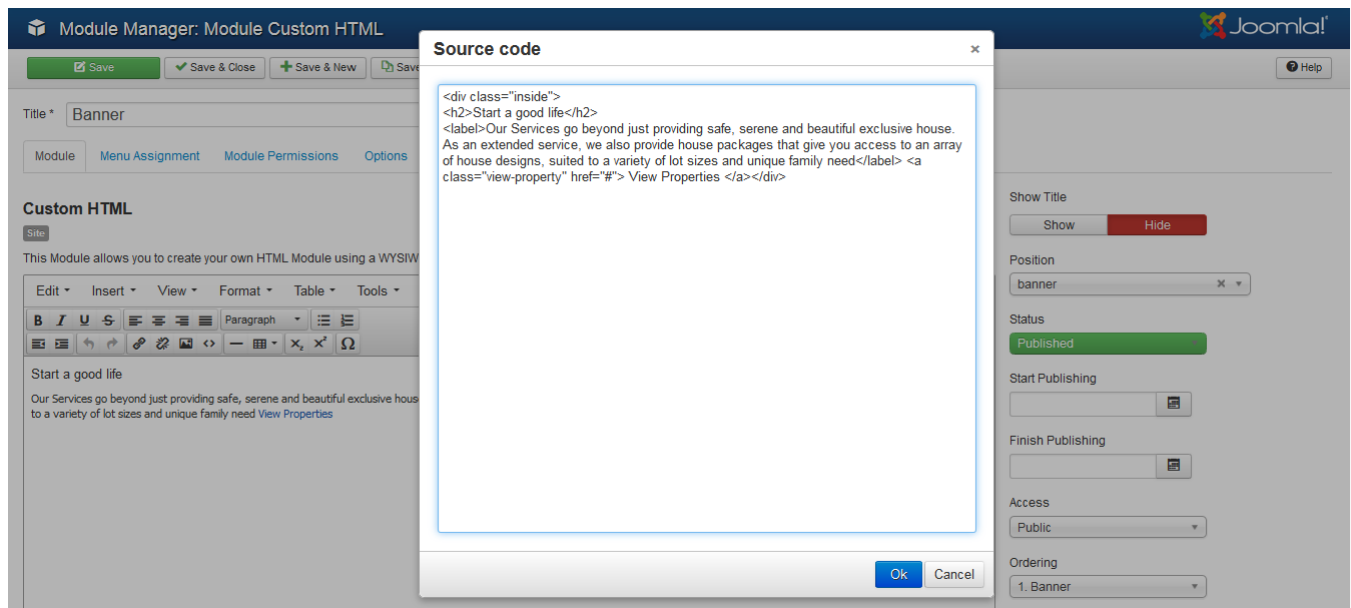

```
<ul>
<li><a href="#">Register</a></li>
<li><a href="#">Log in</a></li>
<li><a href="#">Entries <abbr title="Really Simple Syndication">RSS</abbr></a></li>
<li><a href="#">Comments <abbr title="Really Simple Syndication">RSS</abbr></a></li>
<li><a href="#">WordPress.org</a></li>
</ul>
```

8. Module Banner

Position: **banner**

Custom HTML: Click on Tools > Source code

HTML CODE:

```
<div class="inside">
<h2>Start a good life</h2>
<label>Our Services go beyond just providing safe, serene and beautiful exclusive house. As an extended service, we also provide house packages that give you access to an array of house designs, suited to a variety of lot sizes and unique family need</label> <a class="view-property" href="#"> View Properties </a></div>
```

9. Header contact

 Call us: 1-800-234-6789

Position: **head-contact**

HTML CODE:

```
<p><span class="call-us"><i class="fa fa-phone"> </i> Call us: 1-800-234-6789</span></p>
```

Troubleshooting

JavaScript Errors

Nowadays almost every Joomla extension uses JavaScript to create a more responsive website for a better user experience. Mostly all JavaScript's rely on a JavaScript library like jQuery, Mootools or others. Using different scripts on a webpage can cause conflicts between them. This tutorial helps you to detect and resolve these script errors.

How to detect errors?

If your website does not work as you expect when you click something or an animation stopped working, this could be the result of a script error. In case of an error the script-execution will be stopped by the browser. While some pages might still work, others don't. Not every script is being loaded on every single page of your website. A way to investigate these errors is to use the browser's debug console on the page where the error occurs. In Firefox you can use the Firebug Add-on, other browsers like Chrome, Safari or Opera already have similar tools built-in. These developer tools will show you the script-errors including information about what went wrong, the file and line number, and the line of source code that caused the error. This will really help you with debugging any script errors.

How to resolve errors?

If you've detected a JavaScript error on a page you need to find its origin. Usually the errors are caused by an extension or combination of multiple extensions. The browser's debug console will help you to identify the scripts and their related files on your webserver. Once you have identified the extension you can try disabling it to make sure your page works without any errors again. If the error is gone, you've found the extension causing the conflict. Now you can look for the extensions configuration option and see if it lets you enable/disable loading a JavaScript library like jQuery to resolve the errors.

How to prevent loading jQuery multiple times?

There is an ongoing discussion in the Joomla community on how to prevent loading jQuery multiple times across extensions. We have already taken steps and measures by implementing a widely accepted solution. We register through JApplication whether jQuery is loaded or not. In case a 3rd party extension loads the jQuery library you can use the following code snippet to prevent our **OS Property** extension, theme from loading it twice:

```
// load jQuery, if not loaded before
if (!JFactory::getApplication()->get('jquery')) {
    JFactory::getApplication()->set('jquery', true);
    // add jQuery
    ...
}
```

Recommendation

The above user guide should help one in replicating the Demo site settings for the template and extension on their site.

Recommended :

If you are new or are confused, we recommend installing Quickstart on your localhost and use it as reference for the configurations. This is the best way to work with any template. Links to all the resources are provided above. We suggest you to carefully go over those in order to take the maximum advantage of our products.

Support :

Please raise your support queries in the forum and make sure you follow the [support guidelines](#). We would need to spend more time to get back to you, in case the support guidelines are not followed.
